

## **Formula One Demonstration Application**

Welcome to the Formula One demonstration application. Formula One by VisualTools is a the most advanced spreadsheet component available. With Formula One, your applications can read and write Microsoft Excel-compatible worksheets.

Formula One can be used with VisualBasic, C, Visual C++, Borland C++, and other Windows-based development environments. This demonstration application was created using Formula One in VisualBasic. However, this demonstration is a standalone application and does not require VisualBasic to be loaded on your system.

The demonstration files for Formula One are compressed in the file SSMDI.ZIP.

### **To install this demonstration application on your system, perform the following steps:**

1. Copy the file SSMDI.ZIP to the directory in which you want to install the demonstration application and its associated files.

You may want to create a new directory to contain the files for this application. After you have finished using the demonstration, the application and its associated files can be easily deleted by deleting this directory.

2. From a DOS prompt, enter the command:  
PKUNZIP SSMDI.ZIP

### **To launch the demonstration application:**

1. Return to Windows and launch the File Manager.
2. In the File Manager, display the directory containing the Formula One application files that you just decompressed.
3. Double click the file SSMDI.EXE

The demonstration application launches and is ready for use. The application allows you to create, open, format, save, and print worksheets. A worksheet saved in native Formula One format (TAX.VTS) is provided with the application.
