This Help File was built with RoboHELP®, the Ultimate Help Authoring Tool for Windows and Windows NT.

Blue Sky Software Corporation

7486 La Jolla Blvd., Suite 3
La Jolla, CA 92037-9583, USA

1-800-677-4WIN

Tel: (619) 459-6365

Fax: (619) 459-6366

RoboHELP®, the ultimate Help Authoring Tool for Windows and Windows NT, allows you to design, test and generate on-line, context sensitive hypertext Help systems for Windows. It offers document to Help system conversion and vice versa, generates the RTF, HPJ and H files, and supports both Word 2.0 and Word 6.0, and all features of the Windows Help Engine.

Form

"If you want to construct elegant Help files, RoboHELP is the best tool for the job."

Windows Magazine, David Claiborne

"RoboHELP is far and away the best tool for the job that I've seen."

Dr. Dobb's Journal, April 94, Al Stevens

"RoboHELP reduces all complex structural chores involved in building a Help system to a series of mouse maneuvers that let you concentrate on the contents of the Help system."

Windows Sources, Paul Bonner

"If you are in the business of creating Windows Help files, RoboHELP from Blue Sky Software is the most advanced tool available."

COMPUTE, Clifton Karnes

"With RoboHELP, Help-system text now can be readily converted from printable to online format and back."

Computer Shopper, March 94, Nancy Nicolaisen

"With a tool like RoboHELP, there is no reason for a Windows program to not come with a high-quality Help system."

Software Development, Thomas E. Murphy

"I am very impressed with this product. Creating a Help file system for your project could not be made easier."

Windows OnLine, March 94, Randy Wong

"RoboHELP is an excellent tool for creating Windows help files. It's slick and refined. You can quickly get up to speed on it and produce a first-rate help file in an afternoon."

Frank Sommer, VB Events

"With RoboHELP, you will spend 90 percent of your time on the HLP text and only 10 percent on the mechanics instead of vice versa."

David Thielen, Microsoft

"Congratulations and thanks to Blue Sky Software for marketing RoboHELP. It has helped us transform the merged, formatted pages of our dictionary onto a Help file."

Donald Chan, AT&T

"RoboHELP makes it easy to build a Windows Help system. With this product, every Paradox for Windows custom application can include an on-line Help system. RoboHELP even includes a Paradox object that lets you create context sensitive help in custom Paradox applications without programming."

Kathy Johnson, Director of Paradox Product Marketing and Product Management, Borland International

"RoboHELP enables developers using PowerBuilder to easily create elegant and professional on-line Help systems for enterprise wide solutions. By using RoboHELP, sophisticated Help systems can be created very rapidly thereby offering increased user friendliness and lowering support and training costs on applications created with PowerBuilder."

Doug Miller, Director of Strategic Marketing, Powersoft, Corp.

"Blue Sky Software is the Leader in Visual Programming Technology."

Gene Wang, Executive Vice-President of Applications and Development Tools, Symantec

"I have been working with RoboHELP for about a month. It is great. The increased automation throughout the program, the topic feature and the enhanced hotspot editor are just a few things that make this a fantastic program for Windows Help authors. It is obvious that you talked to people who really create Windows Help files when you designed this program."

Beth Iliff, Documentation Manager, Zsoft

"I began using RoboHELP one month ago in a contract writing project I am doing for The Coca-Cola Company. ... I am converting a 600+ page Script (mainframe) manual to online document format. ... Using your conversion feature, I was able to do the preliminary setup (breaking the files into topic titles, context strings, browse sequences, etc.) in less than two days. ... I compiled the 1.5 MB Help file with no errors! It would have taken us 6 months, not 4 weeks, to get to this point without RoboHELP."

Ellen M. Gibney, Coca-Cola Company Consultant

WinMAKER ProTM, the award-winning Prototyper and C/C++ Code Generator for Windows, Win32, and Windows NT doubles your C/C++ compiler productivity. Visually design your application, then test and edit it in Preview Mode. Integrated Switch-It

TM Code Generation Modules give you the freedom to switch to MFC C++, OWL C++ and ANSI C even in the middle of a project. WinMAKER quickly regenerates code, always preserving the user code 100% upon code re-generation.

"Windows programming is a tough nut to crack, but Blue Sky Software's WindowsMAKER Professional is a capable nutcracker."

PC Magazine

"A user interface that takes a couple of days to develop in WindowsMAKER could easily take a couple of weeks to create on your own, and switching from ANSI C to C++ and MFC or OWL is about as easy as it could be."

Martin Heller, Windows Magazine, Feb 94

"WindowsMAKER comes closest to the rapid application development tool ideal."

Bob DeIRossi, Director of IS at Liberty Real estate Group Inc., Infoworld, Feb 94

"WindowsMAKER enables developers to create Windows user interfaces by simply clicking on menu selections with a mouse..."

PC Week

"...thousands of dollars can be cut from development costs."

DBMS

"The WindowsMAKER product is more flexible and has more features than the AppWizard in Visual C++."

Windows Watcher, Steve Murtha, Senior Editor

"This product is highly recommended."

Computer Language

"WindowsMAKER Professional can regenerate the user interface code without losing application code. This is a big advantage over the AppWizard of Visual C++, which is more of a one-shot, get-you-started tool."

Unisys World, Michael Maddox

"With the animation test mode, you can simulate your designs without wading through the traditional compile-link process..."

BYTE

"While I have put other Windows application environments on the shelf, I am still using WindowsMAKER."

Unisphere

"...a particularly noteworthy product."

Bill Gates, Chairman of the Board and CEO, Microsoft

"Blue Sky Software is known in the industry for their products' solid stability and state-of-the-art technology..."

Michael Hyman, Languages Business Unit Manager, Borland International

"Blue Sky Software provides the Leading Visual Programming Technology in the industry."

Gene Wang, Executive Vice-President of Applications and Development Tools, Symantec

"I am a die-hard Microsoft person, and a lot of people I work with are die-hard Borland people, so I use WindowsMAKER to constantly go back and forth between the MFC and OWL versions."

Larry Harris, Technical Manager, Quick America

"WindowsMAKER has exceeded my expectations. Within just an hour of installing it on my PC, I was actually 'writing' my first native Windows application."

Peter Helgren, Value Added Software

"This is the Prototyper and C/C++ Code Generator I have been waiting for, for years. It's more visual and easier to use than Visual Basic and it generates both C and C++ Code."

Mike Facer, Weworski & Associates

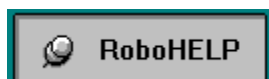

"Once we had tried WindowsMAKER we stopped looking. The product works the way a product should in a GUI, intuitively....In fact, WindowsMAKER could be viewed as not only a prototyping/code generation aide, but as a learning tool for Windows programming, since it's so easy to use, and the code generated can give useful insight into approaches, proper usage and syntax."

Bill Ellis, Hill Arts and Entertainment

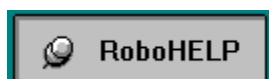

"WindowsMAKER Professional is now an essential element of our Windows development process. I would recommend WindowsMAKER to anyone who wants to develop a Windows application. "

Steve Canesso, Dedicated Technologies
