

DIALOG BOX GENERATOR

You have just downloaded the Dialog Box Generator from Tisoft S.A. which is a free wizard to build Dialog Box easily from your VB 3.0 application. What you will need is to have the pro version of VB 3.0. The files you need are DIALOG.WRI (this file), DIALOG.EXE (the main program). If you find it usefull, you can put the program in your program manager or make it launch at the same time as VB 3.0.

What you will have to do, is first to choose the kind of dialog box you want. And then set the parameters as you want. Selecting the View DB button makes you see the result of your set. To pass it to the clipboard, just select the Copy Clipboard button. To pass it to your form on which you are currently working, you will have to select the Pass to VB button. This button is available only if a module or the Form code of a window is opened.

Take care while selecting flags for your Dialog Box. Some flags do not work with others... For more informations take a look at your manuals. Otherwise, you will have a summary of what you have to do at the bottom line of the screen. Just for fun, you will have a tooltips, toolbar, StatusBar etc... Since this is not very useful here.

I have designed this program for myself and for the guys working with me. If you find some bugs we will be very pleased to change the program. If you have some ideas to improve it, you are wellcomed.

If you find this program useful and use it oftenly, please tell us, and in exchange send us code, tips, tricks, controls, DLL and whatever you have that might help us. You can reach us on Compuserve: 100412,2653 or at the following adress:
