# FAXDROID™ - Enterprise Wide Faxing

Database Faxing With FaxDroid ™

FaxDroid ™ is an intelligent agent that runs under Windows and connects your relational database to your fax gateway. FaxDroid continually seeks out transactions earmarked for fax transmission. You can decide how often FaxDroid ™ checks for transactions, and how detailed the status of the faxes should be. FaxDroid works in conjunction with any CAS compatible fax gateway (Alcom, Facsys, etc.) or CAS compatible fax card (Puredata's Satisfaxtion, Gammalink, Brooktrout, etc.).

No more DDE. This simple API saves development time. No longer will you have to waste time trying to get your programs to connect to someone else's fax system.

Gain control of your faxing costs. FaxDroid provides a complete audit trail of your faxing. Create reports for audit or bill back.

Client / Server Regardless of your client station hardware or operating system, if you can connect to the database you can send faxes. FaxDroid does not require TSR to be loaded on your client work stations.Provide network faxing to your legacy systems without incurring hardware costs. Provide fax services to AS400 or UNIX systems at a fraction of the cost of hardware solutions. Batch programs can create faxes as easily as your PC workstations.

How are Automated Faxes Created?

Any application that can write a record to a database can send information out as a fax to a predetermined contact, or group of contacts. If you want to fax automatically from your custom application , just insert a record into the image table and the contact table on the database. FaxDroid will read the database, pick up all "new" transactions and deliver them to a CAS compatible fax gateway, or an Puredata SatisFAXion card which subsequently faxes them to the contacts.

What Are The Hardware Requirements?

Faxdroid will run under Windows 3.1 and 3.11. You will need a minimum of a 386 processor and 8 megs of memory. The PC must be connected to a Local Area Network. You need only one Faxdroid to handle all of the transactions in your database.

Where Can I Get More Information?

For more information regarding Faxdroid contact Paul Shoebridge at:

Holodyne Corporation.
Suite 323 - 111 Richmond Street West
Toronto, ON
