

## VB MIDI v1.1 installation guide

To install VB MIDI just copy the VB MIDI.HLP to your Visual Basic directory. In this way you will have context sensitive help. Copy VB MDEMO.VBX to your WINDOWS\SYSTEM\ directory (this is where the other Visual Basic VBX's are) or in a directory where you keep your own VBX's. To make use of this new VBX you have to choose 'Add File...' in Visual Basics 'File' menu and select VB MDEMO.VBX. The MIDI icon will appear in the toolbox and off you go!

If you want to register, it is important that REGISTER.EXE and VB MDEMO.VBX are in the same directory. If you are registering a professional version, there must be a subdirectory called '\runtime' with VB MIDIRT.VBX in it.

Good luck and have fun!
