/*
 * relative.c - shows custom gadget relativity
 *
 * (c) Copyright 1992 Commodore-Amiga, Inc.  All Rights Reserved.
 * Preliminary and Confidential.
 *
 * custom gadget relativity allows a gadget to arbitrarily resize
 * itself whenever the window changes size.  This is a complete superset
 * of the functionality of the old GRELWIDTH, GRELRIGHT, etc., features.
 * This example shows a subclass of gadgetclass whose imagery comes
 * from frameiclass.  This gadget's property is that it is always half
 * the size of its domain, and centered within it.  That is, it's always
 * half as wide and half as tall as the inner area of its window, and
 * centered within that area.
 */
