Solitaire II Help

Description:

Yet another solitaire game for windows.

The objective is to get all the cards lined up from King down through Ace by suit.

Instructions:

Just click on a card to move it.

Don't overlook the draw pile at the top right - which can't be used until all other moves are exhausted.

Keyboard:

Not supported.

Requires 286 or higher, 800X600 or higher resolution and a mouse.

Revision History

Solitaire II Revision History

Version 1.20, December 1992
        Rearranged functions and compiled under medium model.
        Added use of register and static vars to speed things up.
        Added menu to replace buttons.
        Added help file.

Version 1.10, August 1992
        Fixed bug that prevented a column of one card from being moved.
        Fixed bug that scored when a king was moved.
        Fixed bug that let face-down cards be moved.
        Fixed draw pile so it only works when no other moves are possible.
        Removed "Setup" button.

Version 1.00, June 1992
        Faster card movement due to new function using a memory device context.
        The program no longer calls WM_PAINT for card movement

Version 0.50, June 1992
        First mostly-working version.
