

Eudora™ by QUALCOMM Windows Version Comparison

Both Eudora by QUALCOMM 2.0, which is commercially available from QUALCOMM Incorporated, and Eudora 1.4, which is distributed by QUALCOMM on the Internet at no charge, upgrade Eudora 1.1 for Windows. However, while both offer new features, Eudora by QUALCOMM includes a number of significant enhancements above and beyond those included in Eudora 1.4.

The table below lists the enhancements to Eudora 1.1 included in both Eudora 1.4 and Eudora by QUALCOMM 2.0 for Windows, and provides a brief description of each. A bullet (•) in the version number box indicates that the enhancement is included in that version.

Enhancement to 1.1

1.4

2.0

Description

Message filtering

•

Sorts messages into user-defined mailboxes and modifies message subjects and priorities based on specified criteria. There are two filtering “terms,” which can be used individually or together to determine when a filter is invoked on a particular message. In addition, a filter or filters can be invoked on all incoming or outgoing messages, can be turned on and off, and can be invoked manually.

Multipurpose Internet Mail Extensions (MIME) encoding/decoding

•

•

Permits the exchange of files and binary data, including messages using international character sets, between multiple platforms.

Technical support

•

Provides designated contacts with toll-free technical support via the Eudora Hotline, as well as a Eudora Hotline e-mail address on the Internet. Technical support is provided to Eudora customers free of charge for the first year from the initial date of purchase.

Direct Serial Dialup

•

Sends and receives mail remotely, via modem, without a SLIP or PPP connection (new in version 2.0.1).

Automatic opening of attachments (MIME, Uuencode, etc.)

•

Opens an attachment within the appropriate application when the attachment name in the message body is double-clicked.

Windows NT and OS/2 support

•
•

Fully functional when running in Windows 3.1 emulation mode under Windows NT and OS/2 (new in versions 1.4.2 and 2.0.2).

On-line Help

•

Provides extensive Microsoft Windows On-Line Help.

Transfer Undo

•

Undoes message transfers.

Uuencode

•

Supports uuencoding and uudecoding for attachment transfer.

“Drag and Drop”

•

Supports a “Drag and Drop” feature for attaching one or more files to messages.

Return Receipt

•

When selected, a cooperating mailer notifies the user via an e-mail message when the outgoing message is delivered.

Multiple Document Interface (MDI)

•

•

Supports the standard Windows user interface.

Mapping

•

•

Allows users to map DOS file extensions, Mac creator and type, and MIME type and subtype.

Mailbox opening using message titles

•

Opens the mailbox where a specific message resides when the title bar of the message header is [Ctrl] + double-clicked.

Multiple signatures

•

Supports two signatures, a primary signature and an alternate signature. No signature is also an option.

.MAILRC Format Nickname Files

•

Imports the .MAILRC file format for Nicknames (new in version 2.0.1). This is the same format used by Eudora by QUALCOMM for the Macintosh.

Change message status

•

Allows users to manually change the status of message summaries in mailbox windows.

Enhancement to 1.1

1.4

2.0

Description

Automatic attachment deletion

•

When enabled, automatically deletes attachment files from the designated attachments folder when the original message is deleted. When attachments are moved to other folders, this no longer applies.

No New Mail alert

•

•

Alerts the user doing a manual mail check when there is no new mail.

Save status

•

Changes message status from unread (•) to read when using Save As... to save the message or messages to a file.

Save all

•

•

When selecting Save with the [Shift] key pressed, saves the contents of all open message and mailbox windows.

Finish Nicknames

•

Automatically finishes the partial text of a Nickname in a message header field.

POP3Post

•

Lets Eudora use extended POP3 servers to send mail in a more secure manner.

New... in Transfer Menu

•

Allows users to create a new mailbox using the Transfer menu and simultaneously transfer messages into the new mailbox.

Individual mailbox compacting

•

•

Allows users to compact individual mailboxes to retrieve unused disk space.

Show all headers

•

Shows all headers when BLAH,BLAH,BLAH icon is selected on incoming message window.

Unwrap Copy

•

When selecting Copy with the [Shift] key pressed, removes the carriage returns from “wrapped” text.

Transfer to Out mailbox

•

Allows message transfers to the Out mailbox.

Nickname replace

•

Prompts you to replace or add to an existing Nickname when creating a new Nickname that uses an existing name.

Nickname expansion insertion

•

With the [Shift] key depressed, inserts the Nickname expansion when addressing messages using the Nicknames window.
