

Eudora™ by QUALCOMM Macintosh Version Comparison

Both Eudora by QUALCOMM 2.1, which is commercially available from QUALCOMM Incorporated, and Eudora 1.4, which is distributed by QUALCOMM on the Internet at no charge, upgrade Eudora 1.3.1 for the Macintosh. However, while both offer new features, Eudora by QUALCOMM includes a number of significant enhancements above and beyond those included in Eudora 1.4.

The table below lists the enhancements to Eudora 1.3.1 included in both Eudora 1.4 and Eudora by QUALCOMM 2.1 for the Macintosh, and provides a brief description of each. A bullet (•) in the version number box indicates that the enhancement is included in that version. A cross (†) in the 2.1 column indicates the enhancement was added with version 2.1.

Enhancement to 1.3.1

1.4

2.1

Description

Power Macintosh support

•
•

Takes full advantage of the power and performance of Apple Power Macintosh computers.

Message filtering

•

Sorts messages into user-defined mailboxes and modifies message subjects and priorities based on specified criteria. There are two filtering “terms,” which can be used individually or together to determine when a filter is invoked on a particular message. In addition, a filter or filters can be invoked on all incoming or outgoing messages, can be turned on and off, and can be invoked manually.

Multipurpose Internet Mail Extensions (MIME) encoding/decoding

•
•

Permits the exchange of files and binary data, including messages using international character sets, between multiple platforms.

Technical support

•

Provides designated contacts with toll-free technical support via the Eudora Hotline, as well as a Eudora Hotline E-mail address on the Internet. Technical support is provided to Eudora customers free of charge for the first year from the initial date of purchase.

Automatic opening of attachments (MIME, Uuencode, etc.)

•

Opens an attachment within the appropriate application when the attachment name in the message body is double-clicked.

On-line Help

-

Provides On-Line Help windows containing quick-reference instructions for accomplishing many of Eudora's operations. These windows are accessed via the Balloon Help menu.

Server maildrop management

- †

Is able to selectively fetch or delete messages from the server and remove messages from the server after a specified period of time.

Color coding messages

- †

Messages can be assigned colors to help users find the messages they need.

Word services

-

Allows users to add word services (such as spell checking) that support the Word Services Suite to the Eudora editor for use with outgoing messages.

Transfer Undo

-

Undoes message transfers.

AppleEvents

-

-

Supports a useful suite of AppleEvents.

Kerberos support

- †

Can be used with the Kerberos Authentication System for increased security.

Multiple Nickname files

-

Supports multiple group-, department- and company-wide mailing lists in addition to the user's personal Nickname list.

Uencode

-

Supports uuencoding and uudecoding for attachment transfer.

System 7 “Drag and Drop”

•

Supports the Macintosh System 7 “Drag and Drop” feature for starting the Eudora software, opening stationery files, mailboxes, and plain text files, and attaching one or more files to messages. In addition, many of these operations can be performed simultaneously.

Enhancement to 1.3.1

1.4

2.1

Description

Stationery messages

-

Creates a “stationery” message file out of any outgoing message, allowing users to create templates of commonly used messages and save them for later use.

Return Receipt

-

When selected, a cooperating mailer notifies the user via an E-mail message when the outgoing message reaches its destination.

Nicknames window stays in foreground

-

When holding down the [shift] key, keeps the Nicknames window in the foreground when addressing messages using the window buttons.

Mailbox convenience features

- †

Users can sort messages, or change message status, priority or label, directly in the mailbox window.

Mailbox opening using message title bars

-

Opens the mailbox where a specific message resides when the title bar of the message header is double-clicked.

Multiple signatures

-

Supports two signatures, a primary signature and an alternate signature. No signature is also an option.

Message “Drag and Drop”

- †

Allows users to drag messages between mailboxes.

Automatic attachment deletion

-

When enabled, automatically deletes attachment files from the designated attachments folder when the original message is deleted. When attachments are moved to other folders, this no longer applies.

Easy opening prior to deleting messages

-

When using the easy open option, opens the next message prior to deleting or transferring the previous message. This speeds up the message window display.

Mailbox grafting

-

Opens and transfers messages to mailbox files that are stored outside the Eudora folder, such as mailbox archive files.

No New Mail alert

-

-

Alerts the user doing a manual mail check when there is no new mail.

Save all

-

-

When selecting Save with the [option] key pressed, saves the contents of all open message and mailbox windows.

Partial finish of Nicknames

-

Finishes Nicknames to the last common character when multiple Nicknames start with the same characters, allowing the user to complete only the nickname extension.

POP3Post

-

Lets Eudora use extended POP3 servers to send mail in a more secure manner.

New... in Mailbox Menu

-

Allows users to create new mailboxes from the Mailbox menu.

Mailbox folder Aliases

-

-

Allows users to place Aliases to whole folders of mailboxes in the Eudora folder.

Individual mailbox compacting

•
•

Allows users to compact individual mailboxes to retrieve unused disk space.

RFC1522 support

•
•

Permits the use of non-ASCII characters in message headers.

Show all headers

•

Shows all headers when BLAH,BLAH,BLAH icon is selected on incoming message window.

Mailbox file opening

•

Allows users to open mailboxes by double-clicking them in the Finder.

Unwrap Copy

•
•

When selecting Copy with the [option] key pressed, removes the carriage returns from “wrapped” text.

Transfer to Out mailbox

•

Allows message transfers to the Out mailbox.

Nickname replace

•

Replaces or adds to an existing Nickname when creating a new Nickname that uses an existing name.
