

Eudora® by QUALCOMM is an electronic mail (e-mail) application that delivers full-function interoperability between Macintoshes and PCs across TCP/IP networks. It provides complete connectivity without requiring specialized e-mail gateways and servers, and it is scalable from smaller local area networks to the largest wide area network.

Regardless of network size or sophistication, the Eudora software is a powerful tool for reducing cost, saving administrative time and simplifying e-mail system expansion. It frees up existing resources, reduces the need for new hardware and software and gives network administrators greater freedom to manage their networks.

The Eudora software's use of the internationally-recognized Simple Mail Transfer Protocol (SMTP) and Post Office Protocol version 3 (POP3) standards eliminates the need for the platform-specific gateways required by many e-mail packages. This eases the task of the network administrator by centralizing e-mail administration and removing the potential disruptions these gateways introduce.

The Eudora software also allows for greater network flexibility, as resources previously dedicated to supporting e-mail are freed up to support other activities. In addition, because it uses SMTP and POP3, the Eudora software can communicate with other e-mail packages without additional protocol translation.

Users will appreciate the Eudora software's easy-to-use interface, which is designed to maximize utility and eliminate frustration. It provides a comprehensive set of editing and operating features, including the ability to attach one or more files directly to messages. It also allows users to send and receive mail remotely via modem. This feature expands the workplace by allowing users to take full advantage of company resources while traveling or telecommuting.

QUALCOMM is committed to providing a level of support that ensures total customer satisfaction. Eudora Customer Support Specialists are available to provide sales information and technical expertise. A toll-free telephone number and Internet mail addresses have been established for your convenience.

FEATURES

For The Network Administrator

- **TCP/IP connectivity** – Connects directly to TCP/IP networks using SMTP and POP3 to exchange mail with any other mail systems that connect to TCP/IP networks, including the Internet.
- **SMTP and POP3 implementation** – Integrates smoothly with existing mail systems, enabling a gradual introduction of the Eudora software and minimizing network disruption.
- **Internet access** – Conforms to the Internet addressing rules of RFC-822, allowing for direct addressing to any Internet mailbox without address translation.
- **Multipurpose Internet Mail Extensions (MIME) support** – Permits the exchange of files and binary data, including messages using international character sets, between multiple platforms.
- **Mobile access** – Is able to use serial connections or SLIP/PPP to provide dialup access.
- **Multiple Nickname lists** – Supports multiple group-, department- and company-wide

mailing lists in addition to the user's personal *Nickname* list.

- **UNIX file compatibility** – Is compatible with UNIX mail files.

For The User

- **Message filtering** – Sorts messages automatically into user-defined mailboxes based on information in the message header or body.
- **Desktop access** – Stores mail locally, allowing for viewing and composing messages even when not connected to a network.
- **Text editing** – Supports familiar word processing functions, including Select, Cut, Copy, Paste and Undo.
- **Find and Sort** – Provides the ability to locate messages by content and to sort messages by subject, sender, date, status or priority.
- **Attachments** – Attaches multiple files, including graphics, video, spreadsheets and word processing documents, directly to messages.
- **Hierarchical mailboxes** – Places mailboxes in mailbox folders to simplify managing large numbers of messages.
- **Mobile access** – Supports dialup connection via modem, enabling the network to be extended beyond the workplace.
- **Macintosh System 7 savvy** – Supports aliases, drag and drop to attach documents and AppleEvents.

System Requirements

Network Requirements

- Host computer supplying:
 - SMTP and POP3, or POP3 with XTND XMIT capabilities
 - User accounts

Macintosh Requirements

- System 7 or later
- Ethernet card or DDP/IP gateway or modem
 - At least 340K of RAM
- Native Power Macintosh version available

PC Requirements

- IBM PC or compatible (minimum 286 processor)
 - Microsoft Windows 3.1 or later
 - Mouse highly recommended
- Ethernet card or modem for serial connection
- WinSockAPI 1.1 compliant networking package (not needed for serial connection)
 - At least 640K of RAM

The Eudora software's functionality and impressive list of features make it the e-mail of choice for progressive network administrators and users alike. To order or obtain more information, call the Eudora Hotline at (800) 2-Eudora or send e-mail to eudora-sales@qualcomm.com.
