## **How to contact us**

Thank you for purchasing a US Robotics / Megahertz product.

We are always interested in hearing from you. If you have any problems, suggestions, or questions with your product, please contact us at the following locations:

**US Mail:** US Robotics / Megahertz  
P.O. Box 16020  
Salt Lake City, Utah 84116

**Support:** (801)-320-7777

**BBS:** (801)-320-8840  
(801)-320-8841

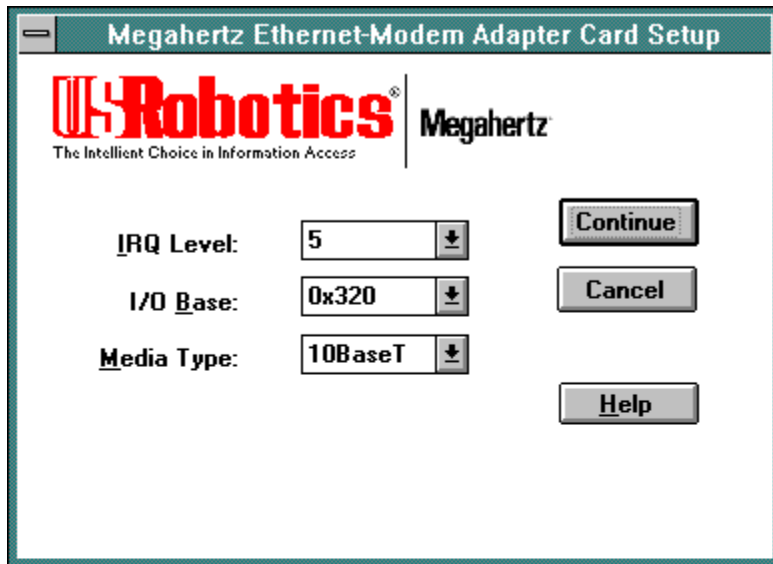

**FAX:** (801)-320-6020

**Internet:** techsupport@mhz.com

**Web Site:** <http://www.megahertz.com>

## Megahertz Ethernet Adapter Setup

Use this dialog box to configure settings for the Megahertz Ethernet adapter card. For more information click on a field in the dialog box displayed below or press <TAB> to move to the field and then press <ENTER>...

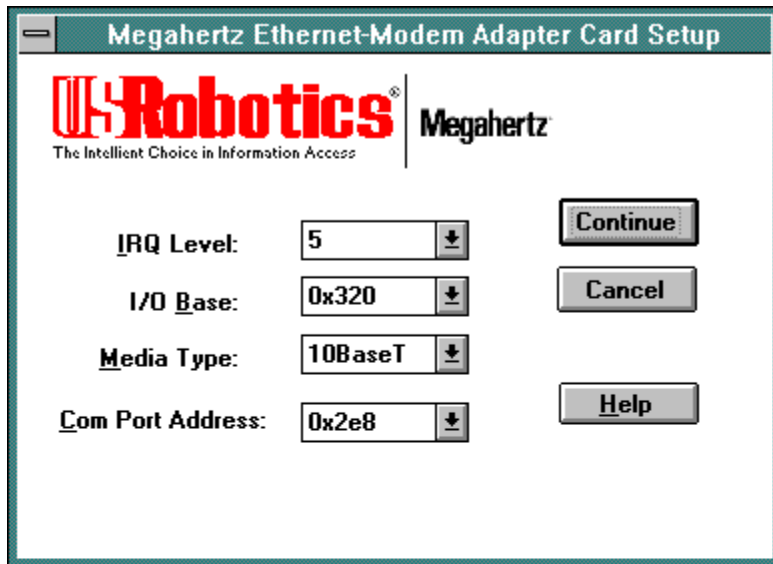

The dialog box is titled "Megahertz Ethernet-Modem Adapter Card Setup". It features the "U4Robotics" logo with the tagline "The Intelligent Choice in Information Access" and the "Megahertz" brand name. The settings are as follows:

Setting	Value
IRQ Level:	5
I/O Base:	0x320
Media Type:	10BaseT

Navigation buttons: Continue, Cancel, and Help.

## Megahertz Ethernet+Modem Adapter Setup

Use this dialog box to configure settings for the Megahertz Ethernet +Modem Ethernet adapter card. For more information click on a field in the dialog box displayed below or press <TAB> to move to the field and then press <ENTER>...

The dialog box is titled "Megahertz Ethernet-Modem Adapter Card Setup". It features the "U4Robotics" logo with the tagline "The Intelligent Choice in Information Access" and the "Megahertz" brand name. The settings are organized into four rows, each with a label, a text field, and a dropdown arrow:

Label	Value	Action
IRQ Level:	5	Continue
I/O Base:	0x320	Cancel
Media Type:	10BaseT	Help
Com Port Address:	0x2e8	

Buttons for "Continue", "Cancel", and "Help" are located to the right of the settings fields.

## **IRQ Level**

Select an interrupt level for this adapter card.

IRQ is a hardware line which is driven by one or more hardware devices indicating to the CPU that the hardware device needs attention from the software. The IBM PC has 16 IRQ lines going into a PIC (Programmable Interrupt Controller). The PIC interfaces with the CPU. The CPU is supposed to call predefined software routines when the interrupt is generated.

For Ethernet+Modem devices, the IRQ Level specifies the IRQ for both the Lan side and the Modem side of the driver.

## **I/O Base**

Select an I/O Port for this adapter card.

I/O address is the address of any hardware device register which is mapped in the I/O space of the x86 microprocessor. The x86 microprocessor has 64K bytes of I/O space and different devices can use the I/O space to map their registers.

For Ethernet+Modem devices, the I/O Base specifies the network I/O address. See Com Base for the I/O address of the communications device.

## Media Type

Select the media type for this adapter card. The default is [10BaseT](#).

## Network Address

Select 12 hexadecimal digits. The address must specify the "locally administered" bit on and the "group" bit off. In other words, the two low order bits of the high-order byte must equal the value 0x02. Each adapter on the network must have a unique network address. The default value is the burned in address contained in the [adapter](#).

## **COM Base**

Specifies the Com Port (Com1 thru 4) I/O Address. You must also select the Ports dialog from the Control Panel and the the proper COM port with the values selected here.

## **Continue**

Select [Continue](#) to save the values defined in the dialog box and exit.

## Cancel

Select [Cancel](#) to exit leaving the current values unchanged.

## Help

Select [Help](#) to display this file.
