The protocol for moving hypertext files across the Internet. Requires an HTTP client program on one end, and an HTTP server program on the other end. HTTP is the protocol used by the World Wide Web (WWW).

The main communications protocol in the Internet suite of protocols that provides reliable, connection-oriented, full duplex streams and uses IP for delivery.

Action messages are brief descriptions of what you want the other users to picture you doing. For example, if another user says something funny, you might post the action message "Raven giggles". Action message are automatically preceded by your nickname, so write your action in the third person. For example:

*Raven waves hello to everyone

Private action messages are sent only to the specified user, preceded by your nickname. For example:

*> Raven winks at you secretly ...

Your nickname does not appear in the Action field, but it will be the first word of your action message.

Points to a specific Web site.

A file that contains characters other than the standard ASCIIcharacters. Binary files cannot be read like text files; they are usually executable programs or compressed files.

An abbreviation for American Standard Code for Information Interchange. This standard code consists of 7 data bits (or binary values) per character. Letters, numbers, and special characters (for example, $,ÿ,#, %) are represented by different ASCII codes. The ASCII character set represents 96 printable characters and 32 non-printable control characters.

A Cyberjack bookmark object that as acts a direct shortcut to an Internet site. You can create CyberLinks to your favorite sites, and send them to other users through email. Also, any URL you can takes you to another site when you double click it is also a CyberLink.

Hypertext Markup file. This file type can be read directly by Cyberjack Web.

A pointer to remote sources on the Internet.

Control the way you search by selecting Exact, Case Sensitive, Case Insensitive or Regular Expression.

When lurking, you are watching the chat to learn more information about the terms and expressions used in the chat.

The status of Cyberjack Ping's search for the specified Internet address.

The result of Cyberjack Ping's last data packet sent to the specified Internet address.

The average response time, in milliseconds, of a returned Cyberjack Ping data packet.

Click to have Cyberjack Ping send data packets to the specified site.

Type the site for Cyberjack Ping to diagnose.

Saves the file with the name, file type and location you specified.

Tell me about the Guidebook

The Cyberjack Guidebook is a personal organizer for storing connections to your favorite Internet sites. Entries in your Guidebook are saved as CyberLinks. Each CyberLink contains the address of a specific Internet site and details about the Cyberjack program used to connect to that site.

The Guidebook comes with hundreds of CyberLinks from the World Wide Web, Internet Relay Chat (IRC), Gopher, FTP and newsgroups. Use the Guidebook as your starting point for navigating the information highway.

From the Guidebook, you can select a Cyberjack program and cruise to your destination, stopping at interesting sites along the way. You can also double click a CyberLink to take the express route directly to a particular site.

As you travel the Internet, you can save any site to your Guidebook as a CyberLink with one click on the toolbar. You can add folders to your Guidebook to customize how you store CyberLinks. You can protect the Guidebook with a password.

To start a Cyberjack program from the Guidebook

▪ On the Start menu, click the Cyberjack program you want to start. The Cyberjack program starts.

Tip

▪ From the Guidebook, you can access all Cyberjack programs. If you are not sure where to start, try using Cyberjack Web and connect to the Cyberjack Web page, at:

http://www.cyberjack.com/

To connect to a site using a CyberLink

1. In the folder area, click the folder to open it.

2. In the display area, double click the CyberLink. The relevant Cyberjack program starts and connects you to the site.

To find a CyberLink

1. On the Edit menu, click Find. The Find All Objects dialog appears.

2. Click the Name & Location tab.

3. In the Named field, type part or all of your search word.

4. Enable Include Subfolders.

5. Click Find Now. Cyberjack searches for CyberLink names that contain your search word.

To send the Guidebook by email

1. On the Guidebook menu, click Send. Your email program starts and displays the Guidebook as an attachment in the message window.

2. Compose your message.

3. When you are ready to send the Guidebook, send the email message.

Note

- For details about using email with Cyberjack, click here

  »

To link to a Guidebook on your local system

1. On the Guidebook menu, point to Attach, and click Link to Guidebook. The Attach Guidebook dialog appears.

2. Use the Look in drop-down list to find the folder that contains the Guidebook you want to link to.

3. Click the Guidebook file, and click Open. The Guidebook window opens.

◻ **Related Topics**

To link to a Guidebook on a remote system

1. On the Guidebook menu, point to Attach, and click Remote Guidebook. The Select Guidebook Server dialog appears.

2. In the drop-down list, click the remote server from which you want to retrieve the other Guidebook and click OK. Cyberjack links to the other Guidebook on the remote server and displays it in the folder area.

3. To view the CyberLinks in the remote Guidebook, click the Guidebook.

▪ Related Topics

To remove a link to a Guidebook on a remote system

1. In the Guidebook folder area, click the link you want to remove, and click the Stop button on the toolbar. The Guidebook on the remote system is disconnected from your Guidebook.

2. On the Edit menu, click Delete. The link to the remote Guidebook is removed.

⬜ **Related Topics**

To create a new folder

1. On the Guidebook menu, point to New and click Folder. A New Folder entry appears in the folder area.

2. Type the name of the folder.

_____

▣ **Related Topics**

To add tabs to a folder

1. On the View menu, enable Alphabet Tabs. The alphabet tabs appear in the display area.

2. In the folder area, double click a folder to open it.

3. In the display area, click an alphabet tab. For example, click the tab ...

   def

   ... to display the names of CyberLinks beginning with the letters "d", "e" and "f."

4. On the View menu, enable Type Tabs. The type tabs appear in the display area.

5. In the display area, click a type tab. For example, click the Web Page tab to display your Web CyberLinks.

Related Topics

To create a CyberLink using a specific program

1. In the Guidebook folder area, click the Guidebook folder in which you want to create the CyberLink.

2. On the Guidebook menu, point to New and click the type of CyberLink you want to create. The New dialog for the program appears.

3. Type the URL and click OK to create a CyberLink. You may be required to type additional information in the "New" dialog, depending on the Cyberjack program.

4. To refresh the window display after creating a CyberLink, click Refresh on the View menu.

Note

▪ You do not need to connect to Internet sites to create CyberLinks—you can create them by entering URLs.

▣ Related Topics

To create a CyberLink without selecting a program

1. Click a Guidebook folder to insert the CyberLink.

2. On the Guidebook menu, point to New and click Address/URL. The Type in the URL dialog appears.

3. In the Universal Resource Locator (URL) field, type the address. For example, type ...

   http://www.cyberjack.com/

   ... to create a Web CyberLink to the Cyberjack home page.

4. Click OK. The CyberLink is created in the folder you currently have open.
