## Introduction

TommySoftware® is pleased to announce a comprehensive range of symbol libraries for serious users of all TommySoftware® CAD and graphic packages. This catalogue lists the full range of symbols in each library although for space reasons we are only illustrating a representative sample from each.

Note that for technical reasons the sample illustrations shown here will not display or print with the accuracy or definition of the original symbols when used in the TommySoftware® application. Specifically some lines will appear jagged, especially on low resolution displays, and curves may not be shown accurately. The samples are intended purely to give you an idea of the libraries contents. Each symbol is an accurate, high definition scale drawing in its own right and has been produced by professionals for TommySoftware®, to industrial standards where appropriate.

Use of the appropriate symbol library for your particular field will save you a considerable amount of time and will greatly enhance the quality of your work. Professional quality drawings will become even easier!

While it is believed that all information given in this catalogue is correct, TommySoftware® does not make any claims regarding the accuracy of the information given, and accepts no responsibility for any consequence of its use or of the products referred to.

No part of this catalogue may be reproduced or transmitted in any form or by any means, electronic or mechanical, without the express written permission of TommySoftware®. The only exception to this is that individuals may make backup copies of the disk on which they received this catalogue, and may also make copies for use by their friends or colleagues, providing that all files supplied are copied in their entirety and unchanged and provided that no charge is made.
