TommySoftware® CAD/DRAW 4 Demo Version 4.01

Dear CAD/DRAW 4 user,

We are pleased that you have decided to take a look at TommySoftware® CAD/DRAW 4 Level 2. As you will see, it is well worthwhile.

TommySoftware® CAD/DRAW 4 is a full-featured technical illustration and graphics system for Windows 95 and Windows NT 3.51. It offers, along with many construction possibilities, a particularly user-friendly graphical user interface which complies with all Windows standards.

The demo version may be freely copied and distributed, as long as the copies are complete and unaltered. Above all, this and other text filles may not be changed in any way.

Installation

To install TommySoftware® CAD/DRAW 4 Level 2, place the program CD into a CD-ROM drive and start the program INSTALL.EXE which is on this CD (in Windows 95, the installation will automatically start when inserting the CD-ROM). If you purchased a disk set instead of a CD, place the first disk into a disk drive and start INSTALL.EXE on that disk.

This starts the installation program, a dialog with the CAD/DRAW logo appears. When installing from CD-ROM, you will first have to select the desired language. Choose it by pressing the corresponding button. Now the main installation dialog will appear. When installing from disk, there is no language

selection, the main installation dialog will appear immediately.

Choose the desired installation option by pressing one of the buttons appearing. This starts the installation procedure. Several dialog boxes appear in which you can specify which files are to be copied and their destination directories. After making your choices, the program prompts you for the disks in the correct order.

Note: It is not possible to install TommySoftware® CAD/DRAW 4 by copying individual files to the hard disk. During installation a directory structure is created, without which the TommySoftware® CAD/DRAW 4 cannot work. Some files are stored on several disks, and have to be joined together before use. In addition, the settings files are only copied to the correct places during the installation routine.

Undo Installation

During installation of TommySoftware® CAD/DRAW 4, some entries are made to the reigstry database. They are removed automatically, if TommySoftware® CAD/DRAW 4 is deinstalled using the **Undo Installation** command from the installation program**.**.

System Requirements

TommySoftware® CAD/DRAW 4 Level 2 requires at least the following:
- Intel 80386 Processor
- Microsoft Windows 95 or Windows NT 3.51 or higher

- 8 MB RAM available to Windows (not including swap file)
- Graphics card and monitor capable of displaying 640×480 pixels and 16 colors or gray levels.
- Mouse or other pointing device.

For working with complex drawings and/or imported bitmap graphics, we recommend the following:
- Intel 80486DX Processor
- Microsoft Windows NT 3.51
- 16 MB RAM available to Windows (plus a permanent swap file of about the same size)
- Accelerated graphics card and monitor capable of displaying 1024×768 pixels and 256 colors.
