

## HERE 1.0 Beta 4

### DESCRIPTION

**Here** is a freeware program that allows you to easily post your ever-changing dynamic PPP or SLIP Internet address to a finger account, thereby allowing others to look up your current Internet address and contact you.

**Here** also includes a finger client to allow you to easily check the PPP or SLIP address postings of other **Here** users.

Since other users will now be able to locate your current address, you will be able to use talk servers such as **WinTalk**; FTP servers such as **WinQV/Net**, **Serv-U**, and **WFTPD**; and HTTP servers such as **HTTPD** and **ZB Server**.

### MINIMUM HARDWARE AND SOFTWARE REQUIREMENTS

**Here** is available in two compilations, one for **Win16** and one for **Win32**. Both compilations require an IBM compatible PC with a **386+** microprocessor and **Winsock 1.1+**. The **Win16** version requires **Windows 3.1+** and the **Win32** version requires **Windows 95, NT, or 3.1** with **Win32s**.

### VERSION AND DOWNLOAD INFORMATION

The latest version of **Here** is 1.0 Beta 4, which has the following changes from the previous version:

- Introduction of Win32 compilation for **Windows 95** and **NT**.
- Fix for displaying information from finger servers that fail to use CR/LF pairs.
- Fix for FTP servers using multiline replies.
- Fix to set time outs during autoposts.
- Removed automatic prompt for missing FTP login information on startup. This allows **Here** to be used simply as a full finger client, even if finger and FTP server facilities are not available for posting.
- Removed some double error messages.

The latest version can be downloaded from the **Here** Home Page:

<http://www-scf.usc.edu/~ebeers/here>

or TUCOWS (The Ultimate Collection of Winsock Software):

<http://www.tucows.com/softtool.html#here>

or Winsock-L:

ftp://papa.indstate.edu/winsock-l/finger/

## INSTALLATION

After unzipping the archive, you will have six files:

here16.exe  
here32.exe  
here.hlp  
here.wri  
here.txt  
file\_id.diz

Create a new directory (for example, c:\here) and copy all of the files into it. Then add a **Here** Program Item to one of your **Program Manager** groups.

File **here16.exe** is the **Win16** version for **Windows 3.1** and **here32.exe** is the **Win32** compilation for **Windows 95** and **NT**. You can, of course, delete one of these two files if you will only be using one of them.

## HELP

The online help feature has complete directions for using **Here**. If you would like to review the help file before starting **Here**, just click on the file **here.hlp** from inside the Windows **File Manager**. You can browse through the help file sequentially from beginning to end by using the browse buttons.
