

WinGO Help

You can obtain information on controls in WinGO's dialog boxes by right clicking on the control, or by pressing the ? icon on the dialog title.

This is a list of the currently defined aliases and the directories they refer to.
To change an entry you can simply double-click on it with the left mouse button.

Move the current entry **up** one position in the list.

Move the current entry **down** one position in the list.

Add a new item to the list.

Pressing this button brings up a dialog box where the new details can be entered.

If an item is already selected, the new item will be added after it, otherwise it will be placed at the bottom of the list.

Modify the current item to the list.

Pressing this button brings up a dialog box where the existing details can be modified.

Delete the current item in the list.

You will be asked to confirm before the item is actually removed.

Adds a separator (horizontal line).

If an item is already selected, the separator will be added after it, otherwise it will be placed at the bottom of the list.

This is the alias for this particular directory entry.

The text entered here will appear in the popup menu when the left mouse button is pressed on the WinGO icon in the system tray.

This is the directory to be opened in Explorer when the alias is selected.

When checked, this item will be placed at the top of a new column in the popup menu.

Display a directory tree to help you locate the directory you want to open when this alias is selected.

The name of the directory you select will automatically be put into the Directory edit box.

When this button is checked, the directory will be opened up as an "open" view.

Open views are Explorer windows which do not show the directory tree on the left hand side.

When this button is checked, the directory will be opened up as an "explorer" view.

Explorer views are Explorer windows which have a directory tree on the left hand side. Explorer views are good for navigation, but the directory tree can take up quite a lot of your valuable desktop, so Explorer views are not always appropriate.

When this button is checked, the directory will be opened depending on the default setting defined by the "Open as..." menu. This can be found by right-clicking on the WinGO icon on the system tray.

When this button is checked, Explorer will open the directory up as the root in the directory tree.

You will not be able to see directories above this one, but this does mean that a lot of complexity is taken away from the directory tree in an Explorer view.

You must enter an alias.

This is the name that will be associated with the directory when the menu is displayed.

You must enter a directory.

If you're not sure of the full path name, press the Browse button.
