1.3 Updates

UPDATES

v1.10 07/02/1993 - New Methods and Bug-fixes: Methods G and I didn't work.

v1.00 02/01/1993 - First official release.

Return

1.4 Preface

PREFACE

As you already might have noticed - this program has been written totally by Heimo Laukkanen and I'm only writing this documentation because he hasn't got time for such things. Another thing that you might have noticed is that this package has been copyrighted by LaSi Software. I'm sure you have never heard about it, because this is our first program. Strange name LaSi comes simply from our last names Siren and Laukkanen, there were no political or financial reasons to found this team, it's just the name of our two man group, nothing more.

1.5 Philosophies

PHILOSOPHIES

I personally think that basically the human race is good - but there are plenty of bad people out there just waiting for a chance to use your valuable text files for their immoral purposes. :-) There can also be some texts that you wouldn't like even your closest friend to read. You have the answer for your problems here, Protco is a simple utility especially written for crypting text files with several different methods - you can also use combinations of these methods for maximum security.

Return

1.6 Using Protco

USING PROTCO

Using Protco is rather simple, just enter the name of file to be crypted to the text gadget or if you have KS2 just press the USE ASL and reques-

ter should appear. Then select the most convenient method to crypt your precious file with the CHANGE METHOD gadget and then press CODE FILE.

Uncrypting files is just as simple as crypting, just select the file and crypt it again with the same method and it's unencrypted. If you have used combinations, just select all the methods backwards.

The methods can also be selected from a pull-down menu and with keyboard shortcuts, currently there are ten available methods for crypting.

Return

1.7 Tech Notes

TECH NOTES

- o Some crypting methods only work with files longer than 8 bytes, remember always to check that the file really was crypted.

Return

1.8 Comments

COMMENTS

I hope you enjoy the program, and if you have anything you would like to say about this program, comments are welcomed - any form criticisms, bug reports, suggestions, or just to say hello, send them to:
