```

1.2 description

```
DESCRIPTION:

This  is  just  Windoze95  like system shut down.  At first I think of
putting  it in game/gag directory but now it is quite working program.
I  have SVGA monitor (without 15kHz life on Amiga is very hard!) and I
wanted  a  program  for  easy  booting in pure AmigaShell but in 31kHz
mode.  It works for me for some weeks.
```

1.3 requirements

```
REQUIREMENTS:

- Amiga :)
- Workbench with MagicWB palette
- OS3.0+ and datatypes
- AGA chips aren't necessarily required but then you have to convert
```

LOGOW.SYS and LOGOS.SYS to less colors

ShutDown should work on graphics cards under CyberGraphX but I didn't
test it.

1.4 installation

INSTALLATION:

Just copy S/LOGOW.SYS and S/LOGOS.SYS to S: directory. Then edit
S/Shell-Sequence (this file is required for booting in AmigaDOS mode)
and put it in S:. Copy ShutDown and ShutBreak to C: and add
following line to your Startup-Sequence just after SetPatch:

  C:ShutBreak >NIL:

If you don't like Win95 screens (I know you hate them :) paint your
own and save them in any format supported by datatypes (IFF, GIF, BMP,
PCX, etc). Remember about renaming files! Only LOGOW.SYS and
LOGOS.SYS names are valid. Files included in archive are in GIF
format. With fast zgif.datatype loading GIFs is near as fast as IFFs.
Screen mode is taken from picture.datatype so if you need to change
it use screen promotor (screen titles: LOGOW and LOGOS).

For better impression install ShutDown as a launcher entry in Tiny
Meter.

1.5 author

AUTHOR:

ShutDown and ShutBreak were written in Devpac assembler on my lovely
A4030/882/10MB/850MB/CDROM. All comments/bug reports send to:

E-mail: phernik@eden.tu.kielce.pl (prefered)
         phernik@sabat.tu.kielce.pl

1.6 distribution

DISTRIBUTION:

ShutDown is FREEWARE. You may use and copy this program freely but
all files must be copied in an unmodified state preferably in LhA or
LZX archive. Use it at your own risk. If you use my program and you

like it send me a postcard or message via e-mail.

If you want to include ShutDown on a CD-ROM and/or magazine coverdisk,
please send me a free copy of the CD/magazine (this is not a must, but
I would appreciate it very much).

1.7 history

HISTORY:

1.0 (5.5.96) - first Aminet release ...
1.1 (3.7.96) - corrected some stupid bugs :)
