

FILBERT-6th Grade Science Experiment Gone Awry

-Filbert runs off of electricity

-Filbert began as a dead frog in a school science experiment. Because of this failed experiment, he is now a hulking 9' muscular frog with a huge 9 volt battery still strapped on his back, with attached probes jabbed into his shoulders

-Filbert's achilles heel is that he is forced to come up with new ways to regenerate his electricity (with his piece of shag carpet, balloon, tongue in a socket etc...)

-he also has a long muscular tongue that can reach distances of up to 10 feet!

-his weapons of choice are two maces
