## Gestalt selector for Text Services Manager

Is there a `Gestalt` selector for the Text Services Manager (TSM)? (I did try to look in the documentation and sample code, but wasn't able to locate it. The only thing I found so far was that sample code tests for Apple events and assumes that TSM is available.)

---

The `Gestalt` selector for TSM isn't yet published in the regular MPW interfaces. To check for availability of TSM, you can use the following code:

```
#define  gestaltTSMgrVersion  'tsmv'

    tsmVersion = 0;
    tsmErr = Gestalt(gestaltTSMgrVersion, &tsmVersion);
    /* If gestaltUnknownErr or gestaltUndefSelectorErr was returned in tsmErr,
```

As suggested by the symbolic names, `Gestalt` (if successful) returns the version number in `tsmVersion`.
