

TZ-Videomaster for Windows V1.0

Do you want to control all the movies (*.avi or if your MCI-driver is installed as well: *.mov) of a CD-ROM by just some mouse-clicks or combine the scenes you like the best to a new virtual movie within few minutes?

TZ-Videomaster gives you total control over each picture.

In **play mode** you can open up to 16 videos at the same time, if you like and have the suitable big screen all of them will be shown in their own window. Just click in a movie window and it will start to play (always the movie in the actual window is shown).

In **record mode** you can scratch up to 20 good scenes even from a very bad CD-ROM and combine them to a new virtual movie in whatever way (repeat, loop) or order you like.

Everything is done **by** just some **mouse**-clicks.

Unregistered users can create new virtual movies but not reopen them again, this feature is reserved to the full version. Registration fee: 55 US \$ plus 5 \$ shipping.
