

System 7.0 rumors are starting. Might as well do my bit to pass them along. The 12 Dec 89 MacWeek states that Apple will make its self imposed spring deadline for the release of System 7.0, but the initial release will be lacking the new print architecture, the Line Layout Manager, AppleScript and possibly the Database Access Manager.

Features expected to be included are the scalable outline font technology, database access, a new Finder, hooks for Interapplication Communications (IAC), the Communications Toolbox and 32-bit QuickDraw.

Raines Cohen of BMUG says to look for Developer ship Jan-Feb. Users, late Spring to Summer sometime.

These are the files for System 7.0d17....it's a developer-only version.
