

This templet for Omnis was designed for an intelligence system for a narcotic unit in a police department. It works well for us and should be adaptable to any complicated filing system which would use not only the primary name but associates and previous names used by the primary subject. The program was written for volunteers to make the entries with minimum training.

It could be modified for sales contacts with products used instead of type drugs.

When a search is done by name it will check several fields for the name. An address search will check only the number or any part of the Street name. The 'help' menus should explain any questions the user should have.

The password for the templet is "Dale", without the quotes.

If you should have any questions or comments, please leave my email. My address on Genie is "SWITZ".

Good luck.
