

These color icons were designed using existing System 4.2 and Imagewriter 2.6 file icons and Ben Haller's CIcon Edit (V1.1) (Available on Delphi in the Mac II database).

The icon documents were created by ResEdit 1.2d, so you can just open the files to go straight into ResEdit and then copy the icons into your own System and Imagewriter files. I have only seen some of the System icons and none of the Imagewriter color icons work. Below is a list of the colored icons with an annotation as to whether they function or not.

<u>Icon</u>	<u>Number in file</u>	<u>Functions?</u>	<u>Notes</u>
<u>System CIcons</u>			
"Cool Mac"	31	Y	Mac in standard StartupScreen
Mac II	62	Y	If renumbered to 31 in System, this will replace the "Cool Mac" icon.
Halt Sign	0	Y	Stop sign with hand.
Talking Face	1	Y	Face with word balloon
Caution Sign	2	Y	Caution sign with "!"
3.5" Disk	-6047	?	Replaces icon of disk with blue disk. Haven't gotten this one to show up yet.
Modem Port	-15903	N	Port from Chooser. Doesn't work now.
Printer Port	-15904	N	Same as Modem Port.
File Find Halt	-15744	N	In File Find Dialogue box.
<u>Imagewriter CIcons</u>			
IW Normal Print	-8191	N	From print dialogue box.
IW Sideways Print	-8194	N	From print dialogue box.

A WORD OF WARNING: If you don't know how to use ResEdit, GET SOME HELP! Tinkering with the code of your files may lead to disaster. Think of it like playing Russian Roulette.....sometimes you win.

I wish to thank Ben Haller for making these icons possible. The really add a nice touch to your displays!
