**CREATE LINKED RECORD considerations**

---

Two things occur when using the **CREATE LINKED RECORD** command that are not stated in the Command Reference Manual.

1. When the **CREATE LINKED RECORD** command is used **it runs the default input layout's procedure of the linked record being created.**
2. When the **CREATE LINKED RECORD** command creates a linked record it immediately saves a blank record to disk regardless if the command **SAVE LINKED RECORD** is used.
