Chris, thanks for taking the time to examine my code and help me with the "Update Event". The entire project is done with "Think Pascal". As you can see, the shell was created with "Prototyper 2.0". Then, other code was either filled in, or other units added to the project. I've used the "Draw Window" provided by Think and used "ScreenBitBounds" as a test for the original sizing of this window. The close box, zoom box, etc. are not visible as they are sized to be off the visible screen. I would appreciate your help. By the Way, do you know of any other good learning materials besides "Mac Revealed" and "Just Enough Pascal" that I can use to master the "Tool Box" further. Thanks Edward Packer.
