

The Microsoft Word 3.02 document entitled, "Sound Manager" was formatted with the following:

Mac II w/ System 6.0.2
Palatino 10, 12, 14, 16, 18
Courier 10, 12
Sonata 18

Pages were sized to the LaserWriter IINTX

Table of contents and index markers are used
(hidden ".c.", ".i.", and ".;")

The use of expanded text

Sections with unique headers and footers

Gutters

Without the fonts listed above or when using a different printer, the results will not be the same as my published version (obviously). Also, if someone is trying to import the Sound Manager document into another word processor I can't expect it to properly handle all the Word options (i.e., hidden text, paragraph lines, etc.).

Good luck,
