

## **SpeedyFinder7 v1.5.4—additional release notes**

### **Important Information - read this!**

I have been told that there are international versions of SpeedyFinder7 around. If you are responsible for these versions please send me a notice saying that you have modified my Control Panel. All I ask is that you get permission and send me details because I can then send you further information as to how to keep it up to date with future releases. Otherwise, you are on your own and I will not help you in the slightest—Sorry.

Balloon help has been removed from this version because I was running out of time. I needed a release to address some bugs before I commenced my exam break. I now have 2 weeks of semester remaining before 2 weeks of exams. You can continue to send mail which will be stored and replied to after my exams are completed. If the bug is urgent mark it so and the person who will be handling my mail will tell me. Don't abuse this privilege.

This is a somewhat rush release so do report problems that you are having. I apologise for this but I thought I should release something otherwise for the next four to five weeks there will be nothing new.

Thanks,

Victor. (08-Oct-92)
