And, that's all of them in 3.39. The new arrivals are 3,4,11,18 and 20. Note: You must use village menus and castle menus. It is the only way that the game can tell where you are. So, use an enter castle to enter the castle menu, putting the castle menu name in optional data. Use the exit castle/village to go back outside. Simple as that, but is guarenteed to screw up royally if you don't do it right.
