

**Simpsons Init 1.2**  
**Created by Juan Escargo**  
**Aka Real Juan**

Jeesh.... my pictures in lights <grin>. If only my mother owned a computer.....

I can't really claim any credit for this other than for putting pieces together found in various sections of AOL. I guess I could lie and say I made the Icons and digitized the sound and created the Simpsons in the first place, but somehow I don't think you would believe me. I would like to give credit to the person who made the Icons, but I honestly do not remember who it was. Same goes for the sound file. I converted it from a Sound Edit file into a resource. The Icons were converted from Icons to Cicons when I found out that the SE30 <which I own> looks for Cicons even though it is running a monochrome monitor. I left the regular Icons in and this should run on all Macs. I am running system 6.0.4 and this has no conflicts with over 100 megabytes of various programs so it should not really cause anyone any problems or conflicts. The pics and sound are purged after startup so it will not eat up memory either. I used a scavanged third time around ShowCinit to build the thing. Anyway I hope you have fun with it. If you have any more interesting Simpsons sound suggestions let me know. I had a hard time selecting one.

Enjoy.....

Real Juan .....AOL

Visit my p/d BBS weekends, Friday 7:00 pm or thereabouts till Sunday at 10:pm. Mac only xfers 1200-2400 baud, full color and PC Ansi support. Kinda dead at the moment while waiting for the author <see Frank, I'm not asking for any money....why are you>

<very large grin> to release a non-beta finished product so I can send in my shareware fee..... (916) 392-9431

PS... Oh yeah, if you don't already know what to do with an init file, just toss it in your system folder and reboot.
