

2/7/91

Network Calendar (NetCal) is a calendar desk accessory so easy to use, you may actually use it! Nothing fancy--what you see is what you get. It's especially nice on large screens. The NetCal DA is a working part of a larger, incomplete network product. Since it is uncertain when (and if) the network product will be completed, the stand-alone DA is released to the public domain.

NetCal DA is distributed free, without warranty. The NetCal DA may be distributed through Public Domain/Shareware sources, but may not be sold for profit. Your feedback on NetCal's potential as a network product is welcome.

NetCal supports multiple calendar windows, so use the DA's Quit option to leave the DA. Any windows you leave open will automatically re-open the next time you choose the DA. NetCal creates and stores calendar files in the NetCal Directory, inside the System Folder.
