

## Excel Bomb

**RON BARON** has reported a problem with Excel and MacTerminal running in Switcher 5.0B1. It seems that whilst closing an Excel file he got the BOMB. He used the Resume switch and after re-creation of the miniFinder and clicking on the Switcher document nothing loaded and the sytem BOMBED again. After the next Resume he selected Excel directly and BOMB again. On resuming and opening the Finder he found that Excel had diminished in size to 4k!! He installed another copy from the backup disk but then every time he tried to printout from Excel the BOMB came again.

If anyone else has experienced this - or any other problem with Excel can they let us know the circumstances. Ron has reported this to MicroSoft and is awaiting their reply.
