WINFILE b: WBRANCH A

The following may be deleted from your actual working copy:

Hints and Limitations:

- * You must have added-in DOS.APP prior to running this MACRO.
- * The MACRO is invoked by invoking the USER (F7) key and then typing "SP" (No quotation marks).
- * This MACRO will invoke the Program Word Proof on text files created by Symphony.
- * This MACRO will handle spell checking using the entire Columns or specified ranges.
- * There SHOULD be no formulas in the "COLUMNS" or "RANGE" or they will be replaced by string values.

- * This file can be Combined into any Symphony file but, should be placed where it won't over write a portion of the existing worksheet. The best way to combine this is to combine the range named "WMACRO".
- * Drive A: must contain Word Proof (WORDPRF.EXE). I think the original program is named "WP.EXE" but I've renamed it due to having several wordprocessors in use. You should either rename Word Proof or fix this Macro.
- * The macro will create a text file called TEMP.SPL you must make sure that the file is a new and unique name on the drive you specify.
- * You may include a path name with the drive designation of the file. i.e. "B:" or "A:\Path\". The Macro will add the file name and extension of "TEMP.SPL". Note: This file is automatically deleted by the macro.
- * This Macro will only handle label lengths of 240.
- *w all the copy protection has been removed, and you may c
