1.32   xmb(xxx).library

```
   Name of the library : xmb<xxxx>.library

   Description         : xmb<xxxx> is a set of libraries for handling
                         different message bases of BBS programs, so
                         it is possible to have one e.g. QWK door used
                         on all BBS sistems. Now, library isn't finished
                         yet, but there is high possibility that it would
                         be, and we would like to preregister the name.
