1.10 PrintManager.guide/History

History
****

 39.0 first public release
 39.1   small changes in PrintManager and spool.device. Added APPICONNAME
   option. When APPICON is set to ACTIVE, the icon is shown as long
   as there is a job available, indepent of its state (active/paused).
   polish catalog. Filerequester no longer "forgets" last selected
   path. removed catalogs/blank.cd. french catalog.
 39.2 bugfix: system crash when trying to print a file from inside
   prtman under non cybergfx systems. Added version number
   to commodity name. Added "Rename ..." job option. New option
   to change the dateformat of the job list.
 39.3 Menuitems weren't always disabled/enabled, when the job list
   changed. APPICON=ACTIVE didn't work when all jobs were placed
   below « Next Job ». Norwegian catalog. DrawInfo wasn't released.
   Changed gui of "rename ..." window. Printing text files from
   inside PrtMan didn't work. Included SetPUNT command into the
   archive. spool.device: sometimes crashed the system when removed
   from memory.
 39.4 new print count funtion, internal changes in spool.device. czech

catalog. APPICONNAME tooltype wasn't saved correctly. SetPUNT
saved the printer preferences only to ENV:. serbian catalog.
security requester when trying to remove all jobs from list
and when trying to overwrite an already existing file by
'Jobs/Save as ...'. reworked listview. spool.device process
wasn't removed from memory on expunge. Added a compatiblity
kludge for printer.device v42, when printing files from
inside PrtManager (not the best solution yet). Fixed rounding
error.

39.5   PrintManager should work with pit.device (MFC) now. Updated serbian
and swedish catalog files. Empty files in SPOOLDRAWER are
automatically deleted on startup.

39.6 Now works with HyperPAR.device. Integrated spool.device into
PrintManager. envvar SD_DEVICETYPE replaced by DEVICETYPE option.
NSCMD_QUERY is used to determine the type of the output device
(serial/parallel). Creates index file to speed up scanning of
spooldrawer. New options: DEVICEWEDGE, UNITWEDGE

39.7 commodity crashed when started a second time (only in 39.6).

39.8 INTERNAL RELEASE
New option: APPMENU. bug when taskname contained full path
(eg. SYS:Tools/xyz), AFAIK only occured when using ToolManager 2.x.

39.9b   New option DELCOM. Now your programs can use an API that allows to
change a jobs' name (see directory Developer). Index file will be
saved 30 seconds after the last change of the job list. Enforcerhit
when settings were saved. Index reading function was broken.
"Copies ..." / "Rename ..." window is now correctly centered within
the main window. New functions "Print once" / "Scheduler". listview
rounds up shown filesize now.

39.9b2 Fixed bugs in DELCOM and API. Moved menuitem "Project/Print ..." to
"Jobs". Renamed "Print once" to "Duplicate". New button to abort the
current print job. Function to send printer commands from within
printmanager. AUTOFF is a bit smarter now, it doesn't add a formfeed
if the job already has one at the end. New option: BUFFERSIZE.

39.9 Stop didn't work correctly when job was already paused. "Settings/
Save" was broken. Some catalogs has been updated (thanks to the
translators).

39.10   Now saves index after 15secs (before 30secs), this should solve
some invalid index problems (eg. system reboot before index has been
saved). Unregistered: SHAREWARE-Requester pops-up when you open the
window for the first time, before it was opened whenever you started
PrintManager. NEW OPTION: POPWINDOW – works similar to APPICON.

39.11   New options: CHECKPRINTERSTATE, SPOOLPRI. Swedish catalog has been
updated. NOKLUDGE option for hyperPAR- and pit.devices that
return the printer state correctly. spool.device: NSCMD_DEVICEQUERY
was broken. DEL key will zip the window. A double-click on a job
will've the same effect as pressing the "Active/Paused" cycle button.
Additionally checks PARBUSY flag to make sure that your printer is
really ONLINE.

39.12   Because of a small bug (?), the API and "Jobs / Print ..." didn't work
without TurboPrint (since 39.9). SAFEREMOVE option forces PM to popup
a requester each time you want to delete a job by using the "Remove"
button. Replaced "Settings / Save" function by a smaller and more
comfortable (from the programmers p.o.v.) one. New option COPYDUPLICATES.
« Next Job » is now displayed in boldstyle. Replaced calls to C:Copy
by an internal routine. DEL will no longer zip the window but instead
remove the selected job from the job list.

39.13   Standard WB tooltypes (DONOTWAIT, STARTPRI, TOOLPRI) wasn't set by

"Settings / Save". SAFEREMOVE requester came up when prtman wanted to
delete a job after printing <Mirko Lukas>.

39.14 ital. catalog by Matteo Cortese. Pressing HELP brings up the manual
<Jens Rosenboom>. Added note concerning SPOOLPRI to the manual. Fixed
a bug that could lead to crashes when the user was playing with one of
the action buttons while a message was pending between PrintManager and
spool.device.

39.15 spanish catalog by Damaso Dominguez. new KEYPATH option to change the
home directory of the keyfile. 68020+ version.

39.16 window is now vertically resizeable (new option: WINDOWHEIGHT). looks
at more places for its manual. WINDOWX/Y weren't updated saved.

39.17 corrected docs: WINDOWHEIGHT is implemented as WINHEIGHT. Just like
MUI, BGUI, ... you can cycle through the gadgets using the TAB key.
Added workaround for a bug in ioblixpar.device (PARBUSY flag works
in reverse order).

39.17a fixed Installer script bug <Axel Teichmann>. Included dutch catalog by
Roland de Herder.

39.18 fixed bug caused by IconifyGadget by Håkon Enger. Optionally adds an
own iconify gadget to the window. speeded up internal copy command by
using async reading/writing. Added additional options to the 'Settings'
menu.

39.18a Added spanish guide, registrationform and catalog to the archive.
1000 'thank you's to Damaso Dominguez.

39.19 added three dummy LVOs (spool.device) to avoid that queryioblix crashs.
used egcs for compilation, which produced a code that is around 10kb
shorter than the one produced by MaxonC. miscellaneous internal changes.

39.20 because of some changes in 39.19, two bugs were introduced: pressing
Esc could crash the machine, 'Rename ...' didn't work properly. compiled
with egcs1.1.

39.21 finally, I fixed 'Rename ...' :) Now upto eight devices/units can be
cached. Had to change the filenote of cachefiles from "Raw Printer Data"
to "RAWPRINTERDATA", additional information are also saved in the
comment. Improved recognition of invalid index files.

39.22 rewrote spool.device, jobs for all 8 devices allowed can be cached at the
same time now. incomplete jobs can be removed from joblist. changed
default drawer for SPOOLDRAWER from T: to T:spool, if the given drawer
doesn't exist it will be created. removed NOKLUDGE option, CHECKPRINTERSTATE
can be used instead!

39.23 new option ENUM=FULLNAME/S <Marcin Orlowski>. spool.device uses async
doublebuffering to speed up saving and printing.

39.24 on some systems (locales) the time string created by
dos.library/DateToStr() doesn't contain seconds, PrtMan didn't take
care of this when drawing the listview contents. When available,
tbiclass (VisualPrefs and titlebar_ic.lha) is used to draw the
iconifyimage. Thanks to Francis Labrie for the bug report.

39.25 Menuitem "Jobs / Lock" can be used to protect a job from deletion, this
includes removing the job from the list after it has been printed.
Copyroutine did not always set the filenote. While copying, a progress
indicator is shown. In order to make copying faster, async double-
buffering is only used when source and dest aren't on the same physical
device.

39.26 old jobs were printed twice because of a bug in the new index-reading
routine <Alexander Doeller>. new serbian, polish and italian catalogs.

39.27 When gtdrag.library is installed, the joblist can be changed by
Drag'N'Drop.

39.28 new czech catalog by Vit Sindlar. now ignores double-clicks on the
joblist when there's no job under the mouse pointer <Alexander Doeller>.

```
   NODRAGNJ/S forbids dragging of "Next Job" <Marcin Orlowski>. compiled
   using egcs 2.95.1.
39.29   now uses MatchNext() to scan the SPOOLDRAWER rather than the buggy
   ExAll(). filerequester better remembers last selected path now.
   when trying to remove "Next Job" no requester will come up (SAFEREMOVE)
   <Marcin Orlowski>. When using OS3.5 the WB menu-item "Icons/Snapshot"
   can be used to save the current appicon position to disk. Dropped 68000/010
   support.
```

1.11   PrintManager.guide/Credits

```
The author want to thank ...
****************************

 all people, who will support the future of this program:-)

 And especially ...
 Marcin Orlowski (ATO) and
 Miloslaw Smyk (ATO) for their suggestions and the polish catalog
 Pascal Walers for the french catalog
 Kimme Utsi (ATO) for the norwegian catalog
 Terry Coles for the error report
 Martin Hassel for the swed. catalog
 Vit Sindlar (ATO) for the czech translation
 John Kelly for his suggestion.
 Ljubomir Jankoviá for the serbian catalog.
 Stephan Riedelbeck for the bug-reports
 Axel Gröger for the bug report concerning PM & PowerCache
 and the donation of DM 10.- :)
 Matteo Cortese for the italian catalog.
 Roland de Herder for the dutch catalog.
 Didier Giron for the french catalog (update).
 Damaso Dominguez for the spanish translation of the program,
 guide, installerscript and registration form. Thanks again.
```

1.12   PrintManager.guide/Bugs

```
Possible problems and their solution
************************************

 If you discover any bugs, please send a detailed bug-report to the Author.
Don't forget to add a descprition of your configuration!

 \textdegree{} Since I don't own a serial printer, I wasn't able to verify if  ←
    PrintManager
   correctly works with such a kind of printer.

 \textdegree{} If PrintManager doesn't recognize some programs sending data to the ←
     printer,
   you should activate the DEVICE option.

 \textdegree{} While PrintManager is printing a file via the datatypes-system, the ←
    Workbench
```

```
   Screen can't be closed. This is because PrintManager opens an invisible window
   on the screen.

\textdegree{} If the program seems to "hang" when trying to print a file via the  ←
   datatypes-
   system, you should activate the DEVICE option.

\textdegree{}~In the case that you use TurboPrint by IrseeSoft, you must  ←
   deactivate the
   TurboPAR option of TP. Otherwise PrtMan cannot recognize any job.

\textdegree{} pit.device: The PDCMD_QUERY of this device is broken this means  ←
   that PM
   cannot determine the printer state.

\textdegree{} PowerCache may cause block errors when PrintManager saves temporary ←
   data on
   a cached disk. Seems that PC has some problems when reading and writing a
   file at the same time. This is not a bug of PM!

\textdegree{} Problems with the HyperCOM io-boards have been reported, either the ←
   hardware
   or software of these boards seem to be buggy (bad printerstate is returned).
   CHECKPRINTERSTATE=NO might help to workaround the problem.
```
