## 1.1 Clipboard V1.00

PureBasic - Clipboard V1.00

The 'ClipBoard' is a system which allows the sharing of information between applications. For example, you can put a piece of text in the clipboard and any program which uses text (text editor, word processor, database, etc.) can access your text in a transparent way. This works for any kind of data (sound, pictures, etc.).

Commands summary:

```
GetClipboardText  
SetClipboardText
```

Example:

```
Text clipboard
```

## 1.2 getclipboardtext

SYNTAX

```
text$ = GetClipboardText()
```

FUNCTION

Returns the current text which is in the Amiga clipboard, or if no text is found in the clipboard it returns a null string.

## 1.3 setclipboardtext

SYNTAX

```
SetClipboardText(Text$)
```

STATEMENT

---

Changes the Amiga clipboard's content with the text given in the parameter. You can pass a null text, but it won't change the Amiga clipboard.
