TINY SOFTWARE INTRODUCES WINROUTE LITE VERSION 4.1

WinRoute Lite Is An Easy-to-Use Network Router and Firewall Software Application With Improved Support For Home and Business

SANTA CLARA, CA, May 16, 2000 - Tiny Software Inc., a leader in router and firewall software solutions for small to medium size networks, today introduced version 4.1 of its popular WinRoute Lite, an easy-to-use network router and firewall software application. WinRoute Lite v4.1 connects the Local Area Network (LAN) with secure Internet sharing including such features as port mapping, multimedia and online gaming support and IP Telephony.

Brandon Talaich, vice president of marketing, said, "The online gaming and multimedia markets are exploding and demanding added support for their networks. We believe that our new WinRoute Lite version 4.1 is the ideal software solution to meet the demands of these growing markets. In addition to the multimedia and online gaming support, our WinRoute firewall security has proven to give small businesses the opportunity to maintain a high-level of security for their network stations."

Multiple gamers can also increase their level of online gaming with game servers through a single IP address when using WinRoute Lite's new Port Mapping feature. Users on a LAN running WinRoute Lite v4.1 can gain access to local servers and functions such as e-mail, FTP, and web use while securing the network from unwanted external intrusion.

The low-level network driver of WinRoute Lite can support plug & play adapters making it easy to switch network cards, versus having to uninstall WinRoute before swapping the cards. It also performs packet de-fragmentation, by organizing data to improve network security and simplifying system administration. With the configuration of an improved Data Network Server (DNS) module, network administrators can work on local networking problems directly without having to enter the public Internet domain.

WinRoute Lite 4.1 is compatible with Windows ® 95, 98, 2000 and NT 4.0. WinRoute Lite 4.1 is available now with license pricing: three-user for \$49, 10-user for \$149, and unlimited user for \$299 at www.tinysoftware.com. Tiny Software will also make WinRoute Lite 4.1 available through its more than 5,000 resellers worldwide.

Tiny Software is a successful software developer providing reliable and affordable networking solutions with the highest degree of security available. Committed to its delivery of high-quality products and customer services, Tiny Software continues to develop and offer the most sophisticated software solutions for networks while maintaining user-simplicity for its customers. Distributed through the Internet and by more than 5,000 resellers, Tiny Software products are currently being used by more than 150,000 networks in 70 countries.
