

NEW Features in C++Builder 3 Client/Server Suite

Build robust applications with advanced Project Management and powerful debugging

New: **Advanced Project Manager** for handling large projects, multi-tier projects, COM servers and clients containing multiple targets

New: **DLL Debugging** saves time in creating and debugging advanced applications

New: **Event Log** for showing process control messages of complex applications

New: **Module View** to see .EXEs and DLL modules within a single debug session

New: **DataWatch BreakPoints** for controlling debug sessions based on register and address contents

New: **Inspecting Local Variables** allows developers to easily watch in scope variables

- **Debug Inspector** for monitoring component properties
- **CPU View** for disassembled C++ debugging

Seamlessly integrated database development builds scalable database applications.

New: **Integrated SQL Builder** for simplified building of complex SQL Queries

Enhanced: **SQL Database Explorer** to visually manage data-specific metadata

Enhanced: **SQL Monitor** to assist testing, debugging and performance tuning

Improved: **DataPump Wizard** for codeless migration of data

- **Over 130 components** to build powerful database applications
- **Cached updates** for increased server responsiveness

Integrated Internet development for building high-performance Web based applications.

New: **ActiveForms** and **Web Deployment** for deploying thin-client, zero configuration client/server applications using the web

New: **Web Server Extensions** for HTML delivery of data to any browser on any machine using your existing client/server skills

New: **WebBridge** for simplified creation of both NSAPI and ISAPI DLLs, WinCGI or CGI executables

New: **17 standard Internet Protocol Components** gets applications to the Web

Productivity of Rapid Application Development gets any C++ application to production in a fraction of the time

New: Code Insight – Developer Productivity

- **Code Templates Wizard** for simplified code creation
- **Code Find Wizard** for finding and navigating through all Delphi source files
- **ToolTip Expression Evaluation** for quicker and easier debugging
- **New:** **Build Visual Applications: one language, one tool, one skillset**
- **MFC and OWL** frameworks support to use both Objects and Components
- **Console application Wizard** for building the simplest applications
- **Resource Wizard** converts Resource scripts to leverage existing code in C++Builder
- **Integrated forms designer and integrated object/component inspector** to visually design C++ applications

One-Step ActiveX/ATL development for reusable components and language interoperability.

New: **One-Step ActiveX/ATL controls** for creating enterprise-wide, industry-standard components

New: **Visual component creation** for instantly creating component templates

New: **Built in COM & DCOM Support** for language interoperability

New: **Packages --** Leading-edge compiler technology for efficient, native code executables

Scalable Database Access for Greater Connectivity

New: **Database drivers** for MS Access, MS FoxPro, Informix, DB2, AS/400
Updated **Native High-Speed SQL Links Drivers** for Oracle, Sybase, MS SQL Server, InterBase
New: **Multiple database engine support** for easy access to any database system
New: **Database Driver Development Kit** for creating high-performance BDE drivers

Business Insight -- Turns Data into Information for Better Decision Making

New: **Decision Cube** crosstabs for multi-dimensional analysis of data
New: **QuickReports 2.0** to easily create, preview and print embedded reports
New: **TeeChart** to turn data into visual information

MIDAS Development Kit for Multi-Tier Distributed Application Services

New: **Remote DataBroker** for zero configuration database applications
New: **Automatic Constraint Propagation** for data integrity
New: **Business Object Broker** for failover safety
