

RememberMe v1.8

New Features

- Add extra verification requirements when restoring from system tray or displaying all passwords.
- Extended size of comments field to prevent scrolling for a reasonable amount of text.
- Corrected bug in Locations list, making all locations to be sorted alphabetically.
- Updated links to “Additional Security Info” under About tab.

Existing Features

- It's 100% Free to use.
- XP Style Interface.
- Multi-user environment. Create multiple secure profiles.
- Customizable categories. Allows you to better organize your password locations by grouping them within your own categories
- Backup and Restore your database to the same or a different computer.

Encryption

- RememberMe uses Rijndael 128-bit AES encryption.
- Each profile uses a hash value that is unique to that profile. This ensures that each profile can access only its information.
- All passwords are stored in a password protected MS Access database. MS Access not required to use the program.
