"First Train for the Internet (Day Excursion";
Internet, training, tutorial, Windows, help, offline, how-to

Preferred BBS filename:

FTDAY.ZIP

Version Number:

1995 version

System Requirements:

Windows 3.1, 256-color graphics helpful.

One-line BBS Description:

Interactive, extensive Windows Internet help

Short Description:

Off-line training for Windows Internet...no-punches-pulled,
down and dirty help with the information and skills needed
to become competent and confident with Windows Internet in
the shortest possible time. Covers essential skills needed
for Internet tasks, software requirements, shopping for a
provider, making sure your computer is internet-fit, and no
"dummies". Designed for ease of use even by first-time
computer users.

Long Description:

This is interactive Internet for Windows, the first resource of its kind, and one of the finest all-around training and tools packages ever created for Windows users. So complete and easy to use that it doesn't even come with a manual. Install the program, click on an icon, and whether you have an Internet account or not, you'll have the Internet at your fingertips...and instant access to the Windows skills you'll need to make the most of it. Within half an hour you'll have tools, knowledge and experience that it takes most new users weeks or even months to acquire, and access to resources only the most experienced net "surfers" ever discover...whether you are connected to the Internet or not!

The Internet is not point-and-click easy. First Train for the Internet is that easy, and the information and tutorials contained in this shareware version will help insure that it stays easy. First Train makes sure you can not only perform the tasks, but understand what you're doing. You'll gain needed skills with the least possible time and effort. Author and developer Cub Lea is respected as one of the most understanding and thorough novice- to intermediate-level DOS and Windows trainers in North America. This package has been described by users as the easiest, most sensitive skills enhancement package they have ever used. Covers everything from backups and ZIP archives to ergonomics, virus protection, Internet security and fine-tuning Windows performance. (Not all of these areas are available in the unregistered version.) Designed for use by absolute computer novices to advanced intermediate Internet veterans with features and information to appeal to both ends of the spectrum.

Registration fee:

US\$20.00 for the shareware version (plus \$2.50 s&h within Canada and the US; \$5.00 elsewhere)

Materials that come with Registration:

The registered shareware version includes free utilities for managing everyday computing and Internet chores, additional walk-throughs for maintaining your own system, customizing utilities for tailoring the look and feel of First Train, and many more graphics. It also includes a completely integrated version of the PC/Internet Lexicon...click on almost any Internet-related word or phrase to see its definition pop up.

Also included with registration is a \$20.00 rebate on the purchase of the complete Tourist Class or First Class version of First Train for the Internet when purchased directly from Dynamic Living Media.

****IMPORTANT NOTE:****

This package is constantly evolving and changing as the net

changes; a complete list of features is not provided here as this would be impractical. We reserve the right to add and remove features at our discretion; however the overall value and utility of the package will not be compromised by these changes.

Other products from Dynamic Living:

***PC/Internet Lexicon: Over 3,000 computing and Internet terms described, defined and cross-referenced in a handy Windows resource. Believed to be the first comprehensive lexical resource and computing dictionary for the PC since Disston Ridge's PC Glossary. Loaded with interesting trivia and useful information, including a huge list of acronyms, the Top Level Domains List (1995), 250 DOS and Windows file extensions explained, Windows 95 table of contents (fully Windows 3.1 compatible), full-text search for Windows 3.1/3.11, and much more. PLEXFREE.EXE and ILEXFREE.EXE are freeware modules widely available on the Internet; site licenses and Edu-Packs are available as well. Integrated single-user version of PC/Internet Lexicon: \$14.95. There is also a help author's plug-in pack designed for creating fast and easy glossaries in Windows helpfiles.

***Easy Windows 95 Internet Setup: The most thorough and user-friendly guide anywhere to upgrading Windows 95 to use the new 32-bit high-performance Winsock software. Includes support for PPP and SLIP connections, over 80 screen shots, a troubleshooting section and a "winsock conflict eraser" to insure no conflicts with existing winsock software. Registration: \$10.00. Custom-designed help packages for specific Internet service providers are available at rates as low as \$300.00 for unlimited distribution to clients.

Part 2: Distribution Requirements

Distribution:

This archive is to be distributed under the "Shareware" concept. Files contained within it may be posted separately or removed only if indicated within the file itself.

All vendors, BBS', disk-of-the-month clubs, vendors of all types and other distribution channels are encouraged to distribute this archive, but it may not be altered in any way. Due to the nature of the installation and uninstallation routines, which will not function correctly outside of the .EXE file supplied, this file must be recompressed into a ZIP, ARJ, UC2 etc. archive if it is to be posted in non-EXE format.
