

Info Window

The Info window displays file and path information, the total file size, as well as the number of characters in the Header, Body and Footer sections. This indicator is updated on opening the document window, exiting the Header, Body or Footer areas, or clicking directly on the Info window.

It is in the format:

```
[drive:path:fileName]  
[document number] [file size: header size+body size+footer size chars]
```

If the document has never been saved (and hence has no current or target path), the first line will contain the document name in quotes.

Back to Master Footers, on to Clip Library, or return to HTML.edit Features.
