

## Convert submenu

The Convert submenu contains:

### Convert Text to Table

Converts the current text selection to an HTML table, with options selected via dialog box for cell delimiter and how to treat first row and column.

### Text to Rows

Similar to 'Convert Text to Table', except that the converted text is not surrounded by `<TABLE></TABLE>` tags. This command would be used to convert text already within a `TABLE` element.

### Table to Text

This command converts an existing HTML table back into text, with various options on converting the cell delimiters.

Back to Table menu, on to Heading menu, or return to Tool Palette Menus.
