

SuperHelper, © Rohan Cook, November 1992/December 1993

This is an unsupported release of SuperHelper.

It supports Finder Rename help, Locking/Unlocking of disks, and Autolaunching of startup items. If you use SuperHelper primarily for its ability to launch startup items, I recommend you use the AutoLauncher AddOn instead.

SuperHelper will shortly be superseded by PowerLock Controls, a new full-featured control panel. In the meantime, it may prove useful to you, particularly the Lock and Unlock Disk feature.
