This is a catalog of applications produced by Secure Design.

Secure Design attempts to make the evaluation products available from
several sources. We can not always distribute the files to every
location that we would like, however we have had continuing success with
several locations. The following list of sites are sites that have
carried our programs in the past.

```
    oak.oakland.edu                     (anonymous FTP)
    ftp.uni-kl.de                       (anonymous FTP)
    Novell forum (user upload library)  (CompuServe)
    EMS Netware Utility CD-ROM          (Tele. 301-924-3594)
```

Demo products can also be sent automatically by e-mail in a uuencoded
format. Send an e-mail message to "auto-help@sdesign.com" with a subject
line of "help" and instructions will be sent to you along with a catalog
of available files.

If you would like an evaluation copy and you do not have access to any of
the sources listed above, feel free to contact us at the address listed on
the first page of this document.

```
Product:                QView Pro
Evaluation file name:   qview224.zip
Current Version:        v2.24
Release Date:           Jan 2, 1995
Price:                  $80 per file server.
Operating System:       DOS, Netware
Keywords:               PCONSOLE PRINT JOB QUEUE MONITOR SPOOL QVIEW
Short Description:       Print queue manager replacement for pconsole.
```

Long Description:

QView Pro is a print queue management tool for Novell networks. QView Pro
is a utility designed to allow complete control of multiple print queues.
Most of the functions provided in Novell's pconsole are available in
QView Pro. QView Pro also allows the operator to view the contents of more
than one print queue at a time. The following is a list of features:

```
    *  Monitor multiple queues simultaneously.
    *  Click-Drag-Drop mouse action moves print jobs between queues.
    *  Available with optional TSR for pop-up use.
    *  Provides intuitive job control.
    *  Delete duplicate and oversize print jobs.
    *  Supports multiple configurations.
    *  Copy print jobs
    *  View and edit print job data.
    *  Screen saver when all queues are empty.
    *  User notification with Novell messages.
    *  Keep a log file of print queue activity.
    *  Spool files from a directory.
    *  Save print data to a file.
```

```
Product:                LanLock
```

```
Evaluation file name:     lanloc13.zip
Current Version           v1.33
Release Date:             Jan 2, 1995
Price:                    $80 per meter zone.
Operating System:         DOS, Windows, Netware 3.x
Keywords:                 METER SOFTWARE LICENSE FILE LOCK COPY PROTECTION
Short Description:         Software meter system for Novell Networks

Long Description:

LanLock is a software metering program.  With LanLock software on several
file servers can be monitored at the same time.  An application can be set
for 8 copies to run from any of 3 servers.  Both DOS and Windows
applications are compatible.  The following is a list of features:

    *  Meter applications from file servers or workstation hard disks.
    *  No TSR programs.
    *  Reports usage in spreadsheets.
    *  No large database files to share.
    *  Meters across servers.  Not server dependent.
    *  Remote configuration available.

-------------------------------------------------------------------------

Product:                  Secure Design Utilities
Evaluation file name:     sdutl120.zip
Current Version           v1.20
Release Date:             Sept 26, 1994
Price:                    $25 per file server.
Operating System:         DOS, Netware
Keywords:                 NETWARE UTILITIES COMMAND LINE MISC
Short Description:         Miscellaneous command line utils for Netware

Long Description:

Secure Design's Utilities is a collection of DOS command line utilities that
can be helpful in managing a Novell network.  Many of these utilities have
been created as a result of discussions on the Internet about Novell.
Results from the programs are returned in DOS errorlevels for ease in
creating batch files.  (Several examples are included.)  The following is
a list of some of the utilities.

    *  CDMAIL     Change to a user's SYS:MAIL\ directory.
    *  GONE       Lock a workstation terminal with password.
    *  NWPAGER    Dial pager numbers when a server fails.
    *  NWPING     Ping a file server.
    *  QCHECK     Check status of a print queue.
    *  QJOBDEL    Remove print jobs from a queue.
    *  QLIST      List print jobs in a queue.
    *  SCHECK     Check login status of a server.
    *  SYNCTIME   Set server clock from workstation.

Product:                  SuperFix
```

```
Evaluation file name:     (no demo available)
Current Version           v1.01
Release Date:             Sept 30, 1994
Price:                    $25 per file server.
Operating System:         DOS, Netware 3.x
Keywords:                 SUPERVISOR PASSWORD LOCKOUT
Short Description:         Restores supervisor password after it is lost.
```

Long Description:

SuperFix is a Netware Loadable Module (NLM) that will change the supervisor
password on a Netware Server. The main purpose of this tool is to allow
access to a server after the supervisor password has been lost or the
account has been locked out (by node control or disabling the login)

SuperFix will allow the change of the supervisor password, remove any login
node restrictions, and reset the account login defaults for the SUPERVISOR
account. As the supervisor account password is changed, each user on the
server is notified of the action taken. SuperFix will not create a new
supervisor account, nor will it correct problems with the bindery database.

SuperFix requires Netware 3.11 and 3.12. Other versions of Netware
are not supported.

```
Product:                  Password Inspector
Evaluation file name:     pinsp110.zip
Current Version           v1.10
Release Date:             Sept 26, 1994
Price:                    $49 per file server.
Operating System:         DOS, Netware 3.x
Keywords:                 PASSWORD SECURITY AUDIT
Short Description:         Utility to prevent guessable passwords.
```

Long Description:

Password Inspector is a utility designed to assist network administrators in
keeping user accounts secure. When run by a Supervisor or equivalent,
Password Inspector will test user passwords with a large dictionary of
common words to see if the password can be found. If a password is found,
the Supervisor will have the option of expiring the password, changing the
password, or disabling the account.

Password Inspector can also generate composite passwords by combining words
in its' dictionary. The dictionary provided with Password Inspector
contains thousands of words, however with the composite password option,
several million words can easily be generated.

Password Inspector must be run by a supervisor or equivalent on a file
server. A user without supervisor access can not use this software.

Features:

   * Check accounts for easily guessed passwords.
   * Generate passwords from multiple words in the dictionary.

```
  *   Select user accounts for checking.
  *   Add custom words to the dictionary.
  *   Change or expire venerable passwords.
  *   Check passwords before allowing the user to change their password.
  *   Save or print a report of the password scan.
```

Password Inspector requires Netware 3.11 or 3.12. Other versions of
Netware are not supported.

EXPORT RESTRICTIONS APPLY! If you are located outside the United States,
please contact Secure Design and ask about export before ordering this
product!

```
Product:                AutoLaser
Evaluation file name:   AutoLaser101.sit.hqx
Current Version         v1.0.1
Release Date:           Oct 17, 1994
Price:                  $10 per workstation, $50 per LAN*.
Operating System:       Macintosh 6.0.5 or later.
Keywords:               PRINTER SELECTION LASERWRITER INIT CHOOSER
Short Description:       INIT utility to select printer on start-up.
```

Long Description:

AutoLaser is an INIT utility for Macintosh Computers. The INIT will
search the local network for LaserWriters, and select one at random.
The user will be notified as to which printer they will be using.

  *   Use AutoLaser in a large computer lab environment to distribute
      the printer load on the network printers. If you shut a printer
      off, it will not be selected on start-up when a computer is rebooted.

  *   Use with laptops. A local printer will always be selected on
      start-up, no matter where you plug your laptop in.

  *   Notify the user which printer that they will be using.

AutoLaser was written for LaserWriter style printers, however it will
work with any print driver that stores the network address of the
printer in the PAPA resource -8192. Other printers include: HP Color
InkJet and ImageWriters.

* LAN site license covers ONE local area network. (One AppleTalk zone name.)

```
Product:                Bootp Namer
Evaluation file name:   BootpNamer102.sit.hqx
Current Version         v1.0.2
Release Date:           Jan 2, 1995
Price:                  $10 per workstation, $50 per LAN*.
Operating System:       Macintosh 6.0.5 or later, MacTCP.
```

```
Keywords:               MACTCP SYSTEM NAME APPLESHARE LOGIN SETUP
Short Description:       Application to set login name on start-up.

Long Description:

Bootp Namer is an application to assist in the upkeep of large appletalk
networks.  Bootp Namer will first obtain an IP address, and a DNS name for a
workstation. Next, it will rename the computer, and update the login name in
the AppleShare Prep file.   This application is especially useful in large
student computer labs where many workstations have similar configurations. A
computer administrator can set up a generic system folder on a server. Bootp
Namer will personalize the generic system folder when run on a workstation.

* LAN site license covers ONE local area network. (One AppleTalk zone name.)
```
