

Balloon Help

Balloon Help is available for almost everything. If the Balloon Help symbol appears in a dialog box, clicking it toggles Balloon Help on and off. File Buddy's Balloon Help contains a lot of information. A lot of people view Balloon Help the same way people used to view the Macintosh—not for the serious user. I'm not one of them, so I put lots of info in the Balloon Help that isn't available anywhere else. I suggest accessing the Balloon Help. I strongly suggest touring (moving the cursor around slowly over everything in sight) any windows that have the  picture in them while Balloon Help is turned on. I decided to provide information this way because it takes fewer words to describe something you're looking at than to describe something with words alone in a Read Me document.
