If you have an older version of ClickChange already installed:

You should click the Quit button now, and remove the old ClickChange control panel and old CC Runner application before installing this new version of ClickChange.

This installer will install the following files:

• ClickChange™ control panel - in the System folder (or the Control Panels folder if you are running under System 7).

• ClickChange™ Data - in the System folder (or the Preferences folder under System 7).

• ClickChange™ folder - which contains optional ClickChange files (like cursors, fonts, icons, patterns, and sounds).

• CC Runner™ application - in the ClickChange folder on your hard disk.

• Patcher™ folder - in the ClickChange folder.   The Patcher folder contains "patch" files you can use to update specific applications for improved control with ClickChange.

You may dramatically reduce the amount of space required by eliminating some of the files. Click the Customize button to select only the specific files you want.

Use the Switch Disk and/or Eject Disk buttons to select the disk where you would like to have ClickChange installed.   Click the Install ClickChange button to begin automated installation of the files.

Note: Because your ClickChange Disk One is a high density disk, there is no Disk Two.

Important: Some virus-protection programs (GateKeeper, SAM™, Virex™, etc.) may warn you about some of the operations performed by this installer.   This is normal. You should always give the installer permission to perform the requested operation. You may find it easier to temporarily disable any virus-protection programs before running the installer.   If you are usng Disinfectant, this step will not be necessary.

Last Minute Changes: Please be sure to read the Read Me Before Installing text file for updated information about last minute changes, and restrictions.
