Grommets	77	0.54
Mets	85	0.54
Jets	164	0.29
Nets	12	1.19
Totals	0	

If you have Microsoft Excel for Macintosh, it can recognize and convert this Lotus 1-2-3 worksheet automatically. Many other PC programs can save files in '.WKS' (1-2-3 version 1) or '.WK1' (version 2) format, including Quattro, Lucid 3-D, Excel and Smart spreadsheet.

This can be done by using the extension mapping in the AccessPC control panel to map the extension 'WK1' to Excel. The file can then be double clicked and it will launch Excel, convert the file and open it.

An alternative method for converting this file is using the translators. Double click on the file when the extension is NOT mapped by AccessPC and a number of options for translation will be presented. One of these can be selected and the file will be converted and opened in the application selected.
