

This file contains listings for a sample of files downloaded from the libraries in the TopSpeed CompuServe(tm) forum (GO TOPSPEED). The files were arbitrarily selected from libraries 15 and 16.

All contents within these files are presented as is, without warranty. The listings are not in any particular order.

We've included these with the Evaluation Edition simply to give you a feel for the resources available to Clarion programmers on the TopSpeed CompuServe forum. You'll find the members of the forum to be knowledgeable, outspoken, and above all, helpful. Note that some examples may not work correctly with the Evaluation Edition.

SCRNEDIT.ZIP
Bin, Bytes: 110838, Count: 190, 24-Sep-95

Title : SCREEN DESIGNER WRITTEN IN CW

Keywords: SCREEN WINDOW DESIGN FORMAT DYNAMIC RUNTIME

This an example of a visual screen designer written in CW, similar to the window formatter in the IDE. It was intended to allow end users to create/customize their data entry forms at runtime. It has several rough edges and is somewhat application-specific. If I had to do it again, I would use a different approach, but perhaps other CW developers can use it as an example or starting point for their own screen designer. All source code included. Enjoy.
