Upgrading a licensed 16bit copy to the 32 Bit Version

If you have a licensed copy of the 16bit version of V3.x of Smart Address you are entitled to a free upgrade to this 32bit version. This 32bit distribution contains a small utility that can detect a valid licensed 16bit Registration DLL (filename SMARTA3X.DLL) and if it finds it will automatically generate a valid 32bit Registration DLL (filename SMARTA32.DLL) and place it in your Windows Directory.

To use the utility simply execute the SA16TO32.EXE program. You can do this most easily by using the icon that will have been placed in the "Smart Address" group in the program manager.

The upgrade utility will correctly detect the SMARTA3X.DLL file if it is in your Windows directory (where the original licensed 16bit install will have put it), or in the same directory as the SA16TO32.EXE program.

You will be notified of the success or failure of the upgrade utility by a message when the utility completes. Assuming it succeeded then the next time you start the 32bit version of Smart Address it will be a licensed version.

For more information on our support and upgrade policy please see the "Upgrade Policy" part of the main Smart Address 3 Help File.
