

Sample Scripts

The following files comprise the samples of how to work with SALT. Each SALT command should be demonstrated at least once within the following set of scripts.

DEM#.SLT	Demo of how compiler directives (#include, #ifdef, etc) work
AUTOCHAT.SLT	Demo of how to automate entry into chat mode when online
CALLDCO.SLT	Demo of how to automate a call to DeltaComm Online via SALT
PASSWORD.SLT	How to access and send passwords stored in a PhoneBook entry
LOGONAME.SLT	How to access and send your logon name store in a PhoneBook
STRSTUFF.SLT	Example usage of string handling functions, script loading
SETTINGS.SLT	How to manipulate devices (terminal, connect, etc.) from SALT
SETUP.SLT	How to manipulate many of the non-device options from SALT
STOPWATC.SLT	Examples of timer functions and use of date/time functions
CAPWATCH.SLT	Using capture files, endless loops, the "terminal" function.
VDEMO.SLT	Getting, saving, cutting, pasting, etc, from the screen.
FILEMOD.SLT	Accessing files with fopen, fseek, etc; file transfers.
VERSIONS.SLT	Accessing version info, script compatibility, etc...
SCRNWIP.SLT	Demo of screen clearing with boxes and a "for" loop.
SHOWOFF.SLT	Shows off various misc. functions of SALT.
MACRO.SLT	Demonstration of how to manipulate keyboard macros from SALT.
PATH.SLT	Using the fnstrip function to work with filenames.
DETERM.SLT	How to determine what kind of character you have on hand.
DDE_DEMO.SLT	Examples on how to use Dynamic Data Exchange in scripts.
